

Powering DS-KB6003WIP Wi-Fi doorbell by PSU

When powering the DS-KB6003WIP WiFi doorbell from a separate PSU as above it is important that the supplied resistor is wired in series with the PSU feed to act as a dampener, failure to do this could result in damage to the DS-KB6003WIP through over voltage. The chime circuit can be powered using a separate battery (ensure you select the appropriate model chime) and wired to the DS-KB6003WIP in parallel with the PSU as shown above.
