ALL RIGHTS RESERVED.
Any and all information, including, among others, wordings, pictures, graphs are the properties of Hangzhou Hikvision Digital Technology Co., Ltd. or its subsidiaries (hereinafter referred to be “Hikvision”). This user manual (hereinafter referred to be “the Manual”) cannot be reproduced, changed, translated, or distributed, partially or wholly, by any means, without the prior written permission of Hikvision. Unless otherwise stipulated, Hikvision does not make any warranties, guarantees or representations, express or implied, regarding to the Manual.

About this Manual
This Manual is applicable to Network Video Recorder (NVR).
The Manual includes instructions for using and managing the product. Pictures, charts, images and all other information hereinafter are for description and explanation only. The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version in the company website (http://overseas.hikvision.com/en/).
Please use this user manual under the guidance of professionals.

Legal Disclaimer
TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, IS PROVIDED “AS IS”, WITH ALL FAULTS AND ERRORS, AND HIKVISION MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL HIKVISION, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF HIKVISION HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. HIKVISION SHALL NOT TAKE ANY RESPONSIBILITIES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, HIKVISION WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.
SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. HIKVISION SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.
IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.
Regulatory Information

FCC Information

FCC compliance: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

This product and - if applicable - the supplied accessories too are marked with “CE” and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2004/108/EC, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info

Industry Canada ICES-003 Compliance

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.
Safety Instruction

These instructions are intended to ensure that user can use the product correctly to avoid danger or property loss. The precaution measure is divided into “Warnings” and “Cautions”

Warnings: Serious injury or death may occur if any of the warnings are neglected.
Cautions: Injury or equipment damage may occur if any of the cautions are neglected.

Warnings

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
- In the use of the product, you must be in strict compliance with the electrical safety regulations of the nation and region. Please refer to technical specifications for detailed information.
- Input voltage should meet both the SELV (Safety Extra Low Voltage) and the Limited Power Source with 100~240 VAC or 12 VDC according to the IEC60950-1 standard. Please refer to technical specifications for detailed information.
- Do not connect several devices to one power adapter as adapter overload may cause over-heating or a fire hazard.
- Please make sure that the plug is firmly connected to the power socket.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service center.
Preventive and Cautionary Tips

Before connecting and operating your device, please be advised of the following tips:

• Ensure unit is installed in a well-ventilated, dust-free environment.
• Unit is designed for indoor use only.
• Keep all liquids away from the device.
• Ensure environmental conditions meet factory specifications.
• Ensure unit is properly secured to a rack or shelf. Major shocks or jolts to the unit as a result of dropping it may cause damage to the sensitive electronics within the unit.
• Use the device in conjunction with an UPS if possible.
• Power down the unit before connecting and disconnecting accessories and peripherals.
• A factory recommended HDD should be used for this device.
• Improper use or replacement of the battery may result in hazard of explosion. Replace with the same or equivalent type only. Dispose of used batteries according to the instructions provided by the battery manufacturer.
Thank you for purchasing our product. If there is any question or request, please do not hesitate to contact dealer.

The figures in the manual are for reference only.

Product Key Features

General
- Connectable to network cameras, network dome and encoders.
- Connectable to the third-party network cameras like ACTI, Arecont, AXIS, Bosch, Brickcom, Canon, PANASONIC, Pelco, SAMSUNG, SANYO, SONY, Vivotek and ZAVIO, and cameras that adopt ONVIF or PSIA protocol.
- Connectable to the smart IP cameras.
- H.265/H.264/MPEG4 video formats
- PAL/NTSC adaptive video inputs.
- Each channel supports dual-stream.
- Up to 32/64 network cameras for other models.
- Independent configuration for each channel, including resolution, frame rate, bit rate, image quality, etc.
- The quality of the input and output record is configurable.

Local Monitoring
- HDMI/VGA1 and HDMI2/VGA2 outputs provided for DS-9600NI-I8.
- HDMI and VGA outputs provided for DS-7600NI-I2 and DS-7700NI-I4.
- HDMI Video output at up to 4K resolution and VGA video output at up to 2K resolution.
- Multiple screen display in live view is supported, and the display sequence of channels is adjustable.
- Live view screen can be switched in group. Manual switch and auto-switch are provided and the auto-switch interval is configurable.
- Quick setting menu is provided for live view.
- Motion detection, video tampering, video exception alert and video loss alert functions.
- Privacy mask.
- Multiple PTZ protocols supported; PTZ preset, patrol and pattern.
- Zooming in by clicking the mouse and PTZ tracing by dragging mouse.

HDD Management
- Up to 8 SATA hard disks and 1 eSATA disk can be connected for DS-9600NI-I8, 4 SATA hard disks for DS-7700NI-I4 (/P) and 2 SATA hard disks for DS-7600NI-I2 (/P).
- Up to 6TB storage capacity for each disk supported.
- Support 8 network disks (NAS/IP SAN disk).
- Support S.M.A.R.T. and bad sector detection.
- HDD group management.
- Support HDD standby function.
- HDD property: redundancy, read-only, read/write (R/W).
- HDD quota management; different capacity can be assigned to different channel.
- (for DS-9600NI-I8) Hot-swappable HDD supporting RAID0, RAID1, RAID5 and RAID10 storage scheme, and can be enabled and disabled on your demand. And 16 arrays can be configured.
- (for DS-9600NI-I8) Support disk clone to the eSATA disk.

Recording, Capture and Playback

![NOTE]
- The capture is supported by DS-9600NI-I8 only.
- Holiday recording schedule configuration.
- Continuous and event video recording parameters.
Multiple recording types: manual, continuous, alarm, motion, motion | alarm, motion & alarm and VCA.

8 recording time periods with separated recording types.

Pre-record and post-record for alarm, motion detection for recording, and pre-record time for schedule and manual recording.

Searching record files and captured pictures by events (alarm input/motion detection).

Tag adding for record files, searching and playing back by tags.

Locking and unlocking record files.

Local redundant recording and capture.

Provide new playback interface with easy and flexible operation.

Searching and playing back record files by channel number, recording type, start time, end time, etc.

Smart search for the selected area in the video.

Zooming in when playback.

Reverse playback of multi-channel.

Supports pause, play reverse, speed up, speed down, skip forward, and skip backward when playback, and locating by dragging the mouse.

Up to 16-ch synchronous playback at 1080p real time.

Manual capture, continuous capture of video images and playback of captured pictures.

Support enabling H.264+ to ensure high video quality with lowered bitrate.

Backup

Export video data by USB, SATA or eSATA device (for DS-9600NI-I8 only).

Export video clips when playback.

Management and maintenance of backup devices.

Either Normal or Hot Spare working mode is configurable to constitute an N+1 hot spare system.

Alarm and Exception

Configurable arming time of alarm input/output.

Alarm for video loss, motion detection, tampering, abnormal signal, video input/output standard mismatch, illegal login, network disconnected, IP confliction, abnormal record/capture, HDD error, and HDD full, etc.

VCA detection alarm is supported.

VCA search for face detection, vehicle plate, behavior analysis, people counting and heat map.

Alarm triggers full screen monitoring, audio alarm, notifying surveillance center, sending email and alarm output.

Automatic restore when system is abnormal.

Other Local Functions

Operable by front panel, mouse, remote control, or control keyboard.

Three-level user management: admin user is allowed to create many operating accounts and define their operating permission, which includes the limit to access any channel.

Operation, alarm, exceptions and log recording and searching.

Manually triggering and clearing alarms.

Import and export of device configuration information.

Network Functions

Two self-adaptive 10M/100M/1000M network interfaces for DS-9600NI-I8 and DS-7700NI-I4, and the multi-address and network fault tolerance working modes are configurable.

One self-adaptive 10M/100M/1000M network interface for DS-7600NI-I2 (P) and DS-7700NI-I4/P.

Eight independent PoE network interfaces are provided for DS-7608NI-I2/8P and DS-7708NI-I4/8P, and
sixteen independent PoE network interfaces for DS-7616 (7632) NI-I2/16P and DS-7716 (7732) NI-I4/16P.

- IPv6 is supported.
- TCP/IP protocol, PPPoE, DHCP, DNS, DDNS, NTP, SADP, SMTP, SNMP, NFS, and iSCSI are supported.
- TCP, UDP and RTP for unicast.
- Auto/Manual port mapping by UPnP™.
- Extranet access by HiDDNS.
- Support access by EZVIZ Cloud P2P
- Remote web browser access by HTTPS ensures high security.
- The ANR (Automatic Network Replenishment) function is supported, it enables the IP camera save the recording files in the local storage when the network is disconnected, and synchronizes the files to the NVR when the network is resumed.
- Remote reverse playback via RTSP.
- Support accessing by the platform via ONVIF.
- Remote search, playback, download, locking and unlocking of the record files, and support downloading files broken transfer resume.
- Remote parameters setup; remote import/export of device parameters.
- Remote viewing of the device status, system logs and alarm status.
- Remote keyboard operation.
- Remote locking and unlocking of control panel and mouse.
- Remote HDD formatting and program upgrading.
- Remote system restart and shutdown.
- RS-232, RS-485 transparent channel transmission.
- Alarm and exception information can be sent to the remote host
- Remotely start/stop recording.
- Remotely start/stop alarm output.
- Remote PTZ control.
- Remote JPEG capture.
- Virtual host function is provided to get access and manage the IP camera directly.
- Two-way audio and voice broadcasting.
- Embedded WEB server.

Development Scalability:

- SDK for Windows system.
- Source code of application software for demo.
- Development support and training for application system.
TABLE OF CONTENTS

3.1  Introduction of Live View ..................................................................................... 47
3.2  Operations in Live View Mode ............................................................................ 48
  3.2.1  Front Panel Operation on Live View .............................................................. 48
  3.2.2  Using the Mouse in Live View ....................................................................... 49
  3.2.3  Using an Auxiliary Monitor .......................................................................... 50
  3.2.4  Quick Setting Toolbar in Live View Mode ................................................... 50
3.3  Adjusting Live View Toolbar .............................................................................. 53
3.4  Channel-zero Encoding ....................................................................................... 55

Chapter 4  PTZ Controls .................................................................................................. 56
4.1  Configuring PTZ Settings .................................................................................... 57
  4.2  Setting PTZ Presets, Patrols & Patterns .............................................................. 58
    4.2.1  Customizing Presets ...................................................................................... 58
    4.2.2  Calling Presets .............................................................................................. 58
    4.2.3  Customizing Patrols ...................................................................................... 59
    4.2.4  Calling Patrols ............................................................................................... 60
    4.2.5  Customizing Patterns ................................................................................... 61
    4.2.6  Calling Patterns ............................................................................................ 61
    4.2.7  Customizing Linear Scan Limit ..................................................................... 62
    4.2.8  Calling Linear Scan ....................................................................................... 63
    4.2.9  One-touch Park ............................................................................................. 63
  4.3  PTZ Control Panel ............................................................................................... 65

Chapter 5  Recording and Capture Settings ..................................................................... 66
Chapter 6  Playback

6.1 Playing Back Record Files .......................................................... 91
  6.1.1 Instant Playback ................................................................. 91
  6.1.2 Playing Back by Normal Search ........................................... 91
  6.1.3 Playing Back by Event Search ............................................. 94
  6.1.4 Playing Back by Tag ............................................................ 95
  6.1.5 Playing back by Smart Playback ........................................ 97
  6.1.6 Playing Back by System Logs ............................................. 99
  6.1.7 Playing Back External File .................................................. 101
  6.1.8 Playing Back by Sub-periods ............................................. 102
  6.1.9 Playing Back Pictures ...................................................... 102

6.2 Auxiliary Functions of Playback ............................................... 104
  6.2.1 Playing Back Frame by Frame ........................................... 104
  6.2.2 Digital Zoom ................................................................... 104
  6.2.3 File Management ............................................................... 105
  6.2.4 Reverse Playback of Multi-channel .................................... 105

Chapter 7  Backup ............................................................................. 107

7.1 Backing up Record Files ............................................................. 108
  7.1.1 Quick Export .................................................................. 108
  7.1.2 Backing up by Normal Video/Picture Search ....................... 110
  7.1.3 Backing up by Event Search ............................................. 112
  7.1.4 Backing up Video Clips or Captured Playback Pictures .......... 113

7.2 Managing Backup Devices ....................................................... 114

7.3 Hot Spare Device Backup ........................................................... 115
  7.3.1 Setting Hot Spare Device .................................................. 115
  7.3.2 Setting Working Device .................................................... 116
  7.3.3 Managing Hot Spare System ............................................. 116

Chapter 8  Alarm Settings ................................................................. 119

8.1 Setting Motion Detection Alarm ................................................. 120

8.2 Setting Sensor Alarms ............................................................... 122

8.3 Detecting Video Loss Alarm ....................................................... 125

8.4 Detecting Video Tampering Alarm ........................................... 127

8.5 Handling Exceptions Alarm ..................................................... 129
Chapter 9 VCA Alarm ................................................................. 134
9.1 Face Recognition ............................................................ 135
9.2 Face Detection .............................................................. 135
9.3 Vehicle Detection .......................................................... 136
9.4 Line Crossing Detection .................................................. 138
9.5 Intrusion Detection ........................................................ 140
9.6 Region Entrance Detection .............................................. 142
9.7 Region Exiting Detection ................................................ 143
9.8 Loitering Detection ........................................................ 143
9.9 People Gathering Detection ............................................. 143
9.10 Fast Moving Detection ................................................... 143
9.11 Parking Detection ......................................................... 144
9.12 Unattended Baggage Detection ....................................... 144
9.13 Object Removal Detection .......................................... 144
9.14 Audio Exception Detection ............................................ 145
9.15 Sudden Scene Change Detection .................................... 146
9.16 Defocus Detection ....................................................... 146
9.17 PIR Alarm ................................................................. 146

Chapter 10 VCA Search .............................................................. 147
10.1 Face Search ............................................................... 148
10.2 Behavior Search ......................................................... 150
10.3 Plate Search .............................................................. 151
10.4 People Counting .......................................................... 152
10.5 Heat Map ................................................................. 153

Chapter 11 Network Settings .................................................. 155
11.1 Configuring General Settings ........................................ 156
11.2 Configuring Advanced Settings ..................................... 158
  11.2.1 Configuring PPPoE Settings ..................................... 158
  11.2.2 Configuring EZVIZ Cloud P2P .................................. 158
  11.2.3 Configuring DDNS ............................................... 159
  11.2.4 Configuring NTP Server ........................................ 163
  11.2.5 Configuring SNMP ............................................. 164
  11.2.6 Configuring More Settings .................................... 164
  11.2.7 Configuring HTTPS Port ...................................... 165
  11.2.8 Configuring Email ............................................... 167
  11.2.9 Configuring NAT .............................................. 168

1.2 IR Remote Control Operations

The NVR may also be controlled with the included IR remote control, shown in Figure 1.4.

Batteries (2×AAA) must be installed before operation.

The keys on the remote control closely resemble the ones on the front panel. See Table 1.4.

Troubleshooting Remote Control:

Make sure you have installed batteries properly in the remote control. And you have to aim the remote control at the IR receiver in the front panel.

If there is no response after you press any button on the remote, follow the procedure below to troubleshoot.

Steps:
1. Go to Menu > Settings > General > More Settings by operating the front control panel or the mouse.
2. Check and remember NVR ID#. The default ID# is 255. This ID# is valid for all the IR remote controls.
3. Press the DEV button on the remote control.
4. Enter the NVR ID# you set in step 2.
5. Press the ENTER button on the remote.

If the Status indicator on the front panel turns blue, the remote control is operating properly. If the Status indicator does not turn blue and there is still no response from the remote, please check the following:

1. Batteries are installed correctly and the polarities of the batteries are not reversed.
2. Batteries are fresh and not out of charge.
3. IR receiver is not obstructed.

If the remote still can’t function properly, please change a remote and try again, or contact the device provider.
1.3 USB Mouse Operation

A regular 3-button (Left/Right/Scroll-wheel) USB mouse can also be used with this NVR. To use a USB mouse:

1. Plug USB mouse into one of the USB interfaces on the front panel of the NVR.
2. The mouse should automatically be detected. If in a rare case that the mouse is not detected, the possible reason may be that the two devices are not compatible, please refer to the recommended the device list from your provider.

The operation of the mouse:

Chapter 2  Getting Started
2.1 Starting Up and Shutting Down the NVR

Purpose:
Proper startup and shutdown procedures are crucial to expanding the life of the NVR.

Before you start:
Check that the voltage of the extra power supply is the same with the NVR’s requirement, and the ground connection is working properly.

Starting up the NVR:
Steps:
1. Check the power supply is plugged into an electrical outlet. It is HIGHLY recommended that an Uninterruptible Power Supply (UPS) be used in conjunction with the device. The Power indicator LED on the front panel should be red, indicating the device gets the power supply.
2. Press the POWER button on the front panel. The Power indicator LED should turn blue indicating that the unit begins to start up.
3. After startup, the Power indicator LED remains blue. A splash screen with the status of the HDD appears on the monitor. The row of icons at the bottom of the screen shows the HDD status. ‘X’ means that the HDD is not installed or cannot be detected.

Shutting down the NVR
Steps:
There are two proper ways to shut down the NVR.
• OPTION 1: Standard shutdown
  1. Enter the Shutdown menu.
     Menu > Shutdown
  2. Click the Shutdown button.
  3. Click the Yes button.
• OPTION 2: By operating the front panel
  1. Press and hold the POWER button on the front panel for 3 seconds.
  2. Enter the administrator’s username and password in the dialog box for authentication.
  3. Click the Yes button.

   ![Shutdown Menu]
   
   Figure 2.1 Shutdown Menu

   2. Click the Shutdown button.
   3. Click the Yes button.

   Do not press the POWER button again when the system is shutting down.

Rebooting the NVR
In the Shutdown menu, you can also reboot the NVR.
Steps:
1. Enter the Shutdown menu by clicking Menu > Shutdown.
2. Click the Logout button to lock the NVR or the Reboot button to reboot the NVR.
2.2 Activating Your Device

**Purpose:**
For the first-time access, you need to activate the device by setting an admin password. No operation is allowed before activation. You can also activate the device via Web Browser, SADP or Client Software.

**Steps:**
1. Input the same password in the text field of **Create New Password** and **Confirm New Password**.

   ![Figure 2.2 Settings Admin Password](image_url)

   **STRONG PASSWORD RECOMMENDED** – We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

2. Click **OK** to save the password and activate the device.

   ![Figure 2.3 Warning](image_url)

   For the old version device, if you update it to the new version, the following dialog box will pop up once the device starts up. You can click **YES** and follow the wizard to set a strong password.
2.3 Using the Wizard for Basic Configuration

By default, the Setup Wizard starts once the NVR has loaded, as shown in Figure 2.4.

Operating the Setup Wizard:

1. The Setup Wizard can walk you through some important settings of the NVR. If you don’t want to use the Setup Wizard at that moment, click the Cancel button. You can also choose to use the Setup Wizard next time by leaving the “Start wizard when the device starts?” checkbox checked.

2. Click Next button to enter the date and time settings window, as shown in Figure 2.5.

3. After the time settings, click Next button which takes you back to the Network Setup Wizard window, as shown in the following figure.
2 self-adaptive 10M/100M/1000M network interfaces provided for DS-9600NI-I8 and DS-7700NI-I4, and two working modes are configurable: multi-address and network fault tolerance. And 1 self-adaptive 10M/100M/1000M network interface for DS-7600NI-I2 (/P) and DS-7700NI-I4/P.

4. Click Next button after you configured the basic network parameters. Then you will enter the EZVIZ Cloud P2P interface. Configure the EZVIZ Cloud P2P according to your need.

5. Click Next button after you configured the basic network parameters. Then you will enter the Advanced Network Parameter interface. You can enable UPnP, DDNS and set other ports according to your need.
6. Click **Next** button after you configured the network parameters, which takes you to the RAID configuration window.

   - The RAID is supported by DS-9600NI-I8 series NVR only.

7. Click **Next** button to enter the Array Management window.
8. Click Next button after you configured the network parameters, which takes you to the HDD Management window, shown in Figure 2. 11.

![Image](image1.png)  
Figure 2. 10 Array Management

![Image](image2.png)  
Figure 2. 11 HDD Management

9. To initialize the HDD, click the Init button. Initialization removes all the data saved in the HDD.

10. Click Next button. You enter the Adding IP Camera interface.

11. Click Search to search the online IP Camera and the Security status shows whether it is active or inactive.

Before adding the camera, make sure the IP camera to be added is in active status.

If the camera is in inactive status, you can click the inactive icon of the camera to set the password to activate it. You can also select multiple cameras from the list and click the One-touch Activate to activate the cameras in batch.

Click the Add to add the camera.
12. Click **Next** button. Configure the recording for the added IP Cameras.

13. Click **OK** to complete the startup Setup Wizard.
2.4 Login and Logout

2.4.1 User Login

Purpose:
If NVR has logged out, you must login the device before operating the menu and other functions.

Steps:
1. Select the User Name in the dropdown list.

   ![Login Interface](image)

   Figure 2.14 Login Interface

2. Input Password.
3. Click OK to log in.

   ![User Account Protection](image)

   Figure 2.15 User Account Protection

   In the Login dialog box, if you enter the wrong password 7 times, the current user account will be locked for 60 seconds.

2.4.2 User Logout

Purpose:
After logging out, the monitor turns to the live view mode and if you want to perform any operations, you need to enter user name and password log in again.

Steps:
1. Enter the Shutdown menu.
   
   Menu > Shutdown
2. Click **Logout**.

![NOTE]

After you have logged out the system, menu operation on the screen is invalid. It is required to input a user name and password to unlock the system.
2.5 Adding and Connecting the IP Cameras

2.5.1 Activating the IP Camera

*Purpose:* Before adding the camera, make sure the IP camera to be added is in active status.

*Steps:*

1. Select the **Add IP Camera** option from the right-click menu in live view mode or click **Menu > Camera** to enter the IP camera management interface.

   For the IP camera detected online in the same network segment, the **Security** status shows whether it is active or inactive.

   ![IP Camera Management Interface](image1)

2. Click the inactive icon of the camera to enter the following interface to activate it. You can also select multiple cameras from the list and click the **One-touch Activate** to activate the cameras in batch.

   ![Activate the Camera](image2)

3. Set the password of the camera to activate it.

   **Use Admin Password:** when you check the checkbox, the camera (s) will be configured with the same
admin password of the operating NVR.

![Figure 2. 19 Set New Password]

Create New Password: If the admin password is not used, you must create the new password for the camera and confirm it.

**STRONG PASSWORD RECOMMENDED** – We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

4. Click **OK** to finish the activating of the IP camera. And the security status of camera will be changed to **Active**.

### 2.5.2 Adding the Online IP Cameras

Purpose:
The main function of the NVR is to connect the network cameras and record the video got from it. So before you can get a live view or record of the video, you should add the network cameras to the connection list of the device.

Before you start:
Ensure the network connection is valid and correct. For detailed checking and configuring of the network, please see *Chapter Checking Network Traffic* and *Chapter Configuring Network Detection*.

- **OPTION 1:**

**Steps:**
1. Click to select an idle window in the live view mode.
2. Click the **icon in the center of the window** to pop up the adding IP camera interface.
3. Select the detected IP camera and click the **Add** button to add it directly, and you can click the **Search** button to refresh the online IP camera manually. Or you can choose to custom add the IP camera by editing the parameters in the corresponding textfiled and then click the **Add** button to add it.

- **OPTION 2:**

  **Steps:**
  1. Select the **Add IP Camera** option from the right-click menu in live view mode or click **Menu > Camera > Camera** to enter the IP camera management interface.

2. The online cameras with same network segment will be detected and displayed in the camera list.

3. Select the IP camera from the list and click the **Add** button to add the camera. Or you can click the **One-touch Adding** button to add all cameras (with the same login password) from the list.
Make sure the camera to add has already been activated.

4. (For the encoders with multiple channels only) check the Channel Port checkbox in the pop-up window, as shown in the following figure, and click OK to add multiple channels.

![Channel Port](image)

Figure 2. 22 Selecting Multiple Channels

- **OPTION 3:**
  
  **Steps:**
  
  1) On the IP Camera Management interface, click the Custom Adding button to pop up the Add IP Camera (Custom) interface.

  ![Add IP Camera (Custom)](image)

  Figure 2. 23 Custom Adding IP Camera Interface

  2) You can edit the IP address, protocol, management port, and other information of the IP camera to be added.

  ![NOTE](image)

  If the IP camera to add has not been activated, you can activate it from the IP camera list on the camera management interface.
3) (Optional) Check the checkbox of **Continue to Add** to add other IP cameras.

4) Click **Add** to add the camera.

For the successfully added IP cameras, the Security status shows the security level of the password of camera: strong password, weak password and risk password.

![Image of successfully added IP cameras]

### 2.5.3 Editing the Connected IP Cameras and Configuring Customized Protocols

After the adding of the IP cameras, the basic information of the camera lists in the page, you can configure the basic setting of the IP cameras.

**Steps:**

1. Click the ![Edit] icon to edit the parameters; you can edit the IP address, protocol and other parameters.
Channel Port: If the connected device is an encoding device with multiple channels, you can choose the channel to connect by selecting the channel port No. in the dropdown list.

2. Click OK to save the settings and exit the editing interface.

To edit advanced parameters:

1. Drag the horizontal scroll bar to the right side and click the icon.

2. You can edit the network information and the password of the camera.
3. Click **OK** to save the settings and exit the interface.

**Configuring the customized protocols**

**Purpose:**
To connect the network cameras which are not configured with the standard protocols, you can configure the customized protocols for them.

**Steps:**
1. Click the **Protocol** button in the custom adding IP camera interface to enter the protocol management interface.

   ![Protocol Management Interface](image)

   **Figure 2. 28 Protocol Management Interface**

There are 16 customized protocols provided in the system, you can edit the protocol name; and choose whether to enable the sub-stream.

2. Choose the protocol type of transmission and choose the transfer protocols.

Before customizing the protocol for the network camera, you have to contact the manufacturer of the network camera to consult the URL (uniform resource locator) for getting main stream and sub-stream.

The format of the URL is: `[Type]://[IP Address of the network camera]:[Port]/[Path]`. 

---

42

- **Protocol Name:** Edit the name for the custom protocol.
- **Enable Substream:** If the network camera does not support sub-stream or the sub-stream is not needed leave the checkbox empty.
- **Type:** The network camera adopting custom protocol must support getting stream through standard RTSP.
- **Transfer Protocol:** Select the transfer protocol for the custom protocol.
- **Port:** Set the port No. for the custom protocol.
- **Path:** Set the resource path for the custom protocol. E.g., ch1/main/av_stream.

The protocol type and the transfer protocols must be supported by the connected network camera.

After adding the customized protocols, you can see the protocol name is listed in the dropdown list, please refer to Figure 2. 29.

3. Choose the protocols you just added to validate the connection of the network camera.

### 2.5.4 Editing IP Cameras Connected to the PoE Interfaces

This chapter is only applicable for DS-7600NI-I2/P and DS-7700NI-I4/P series NVR.

The PoE interfaces enables the NVR system to pass electrical power safely, along with data, on Ethernet cabling to the connected network cameras.

Up to 8 network cameras can be connected to DS-7608NI-I2/8P and DS-7708NI-I4/8P, and 16 network cameras to DS-7616 (7632) NI-I2/16P and DS-7716 (7732) NI-I4/16P. If you disable the PoE interface, you can also connect to the online network cameras. And the PoE interface supports the Plug-and-Play function.

**Example:**

For DS-7608NI-I2/8P, if you want to connect 6 network cameras via PoE interfaces and 2 online cameras, you must disable 2 PoE interfaces in the Edit IP Camera menu.

**To add Cameras for NVR supporting PoE function:**
**Before you start:**

Connect the network cameras via the PoE interfaces.

**Steps:**

1. Enter the Camera Management interface.

   Menu> Camera> Camera

   ![List of Connected Cameras](image)

   Figure 2. 30 List of Connected Cameras

   The cameras connecting to the PoE interface cannot be deleted in this menu.

2. Click the **button, and select the Adding Method in the drop-down list.

   - **Plug-and-Play:** It means that the camera is connected to the PoE interface, so in this case, the parameters of the camera can’t be edited. The IP address of the camera can only be edited in the Network Configuration interface, see *Chapter 11.1 Configuring General Settings* for detailed information.

   ![Edit IP Camera Interface - Plug-and-Play](image)

   Figure 2. 31 Edit IP Camera Interface - Plug-and-Play

   - **Manual:** You can disable the PoE interface by selecting the manual while the current channel can be used as a normal channel and the parameters can also be edited.
Input the IP address, the user name and password of administrator manually, and click **OK** to add the IP camera.

![Edit IP Camera Interface - Manual](image)

Figure 2. 32 Edit IP Camera Interface - Manual
Chapter 3   Live View
3.1 Introduction of Live View

Live view shows you the video image getting from each camera in real time. The NVR automatically enters Live View mode when powered on. It is also at the very top of the menu hierarchy, thus pressing the ESC many times (depending on which menu you’re on) brings you to the Live View mode.

Live View Icons

In the live view mode, there are icons at the upper-right of the screen for each channel, showing the status of the record and alarm in the channel, so that you can know whether the channel is recorded, or whether there are alarms occur as soon as possible.

Table 3.1 Description of Live View Icons

<table>
<thead>
<tr>
<th>Icons</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Icon]</td>
<td>Alarm (video loss, video tampering, motion detection, VCA and sensor alarm)</td>
</tr>
<tr>
<td>![Icon]</td>
<td>Record (manual record, schedule record, motion detection, VCA and alarm triggered record)</td>
</tr>
<tr>
<td>![Icon]</td>
<td>Alarm and Record</td>
</tr>
<tr>
<td>![Icon]</td>
<td>Event/Exception (motion detection, VCA, sensor alarm or exception information, appears at the lower-left corner of the screen. Please refer to Chapter 8.6 Setting Alarm Response Actions for details.)</td>
</tr>
</tbody>
</table>
3.2 Operations in Live View Mode

In live view mode, there are many functions provided. The functions are listed below.

- **Single Screen**: showing only one screen on the monitor.
- **Multi-screen**: showing multiple screens on the monitor simultaneously.
- **Auto-switch**: the screen is auto switched to the next one. And you must set the dwell time for each screen on the configuration menu before enabling the auto-switch.
  
  Menu>Configuration>Live View>Dwell Time.
- **Start Recording**: continuous record and motion detection record are supported.
- **Output Mode**: select the output mode to Standard, Bright, Gentle or Vivid.
- **Add IP Camera**: the shortcut to the IP camera management interface.
- **Playback**: playback the recorded videos for current day.
- **Aux Monitor**: the NVR checks the connection of the output interfaces to define the main and auxiliary output interfaces. The priority level for the main and aux output is HDMI1/VGA1 > HDMI2/VGA2 (for DS-9600NI-I8) and HDMI > VGA (for DS-7600NI-I2 and DS-7700NI-I4).
  
  DS-9600NI-I8: When the HDMI1, HDMI2, VGA1 and VGA2 are all connected, the HDMI1/VGA1 is used as main output and the HDMI2/VGA2 is used as the aux output.
  
  DS-7600NI-I2 and DS-7700NI-I4: When both the HDMI and VGA are connected, the HDMI is used as main output and the VGA is used as the aux output.

When the aux output is enabled, the main output cannot perform any operation, and you can do some basic operation on the live view mode for the Aux output.

3.2.1 Front Panel Operation on Live View

<table>
<thead>
<tr>
<th>Functions</th>

<tr>
<td>Output Mode</td>
<td>Four modes of output supported, including Standard, Bright, Gentle and Vivid.</td>
</tr>
<tr>
<td>Aux Monitor</td>
<td>Switch to the auxiliary output mode and the operation for the main output is disabled.</td>
</tr>
</tbody>
</table>

**NOTE**

- The *dwell time* of the live view configuration must be set before using **Start Auto-switch**.
- If you enter Aux monitor mode and the Aux monitor is not connected, the mouse operation is disabled; you need to switch back to the Main output with the MAIN/AUX button on the front panel or remote.
- If the corresponding camera supports intelligent function, the Reboot Intelligence option is included when right-clicking mouse on this camera.

![Right-click Menu](image)

Figure 3.1 Right-click Menu
3.2.3 Using an Auxiliary Monitor

Certain features of the Live View are also available while in an Aux monitor. These features include:

- **Single Screen**: Switch to a full screen display of the selected camera. Camera can be selected from a dropdown list.
- **Multi-screen**: Switch between different display layout options. Layout options can be selected from a dropdown list.
- **Next Screen**: When displaying less than the maximum number of cameras in Live View, clicking this feature will switch to the next set of displays.
- **Playback**: Enter into Playback mode.
- **PTZ Control**: Enter PTZ Control mode.
- **Main Monitor**: Enter Main operation mode.

In the live view mode of the main output monitor, the menu operation is not available while Aux output mode is enabled.

3.2.4 Quick Setting Toolbar in Live View Mode

On the screen of each channel, there is a quick setting toolbar which shows when you single click the mouse in the corresponding screen.

![Quick Setting Toolbar](image)

Table 3.4 Description of Quick Setting Toolbar Icons

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
<th>Icon</th>
<th>Description</th>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Enable/Disable Manual Record" /></td>
<td>Enable/Disable Manual Record</td>
<td><img src="image" alt="Instant Playback" /></td>
<td>Instant Playback</td>
<td><img src="image" alt="Mute/Audio on" /></td>
<td>Mute/Audio on</td>
</tr>
<tr>
<td><img src="image" alt="Capture" /></td>
<td>Capture</td>
<td><img src="image" alt="PTZ Control" /></td>
<td>PTZ Control</td>
<td><img src="image" alt="Digital Zoom" /></td>
<td>Digital Zoom</td>
</tr>
<tr>
<td><img src="image" alt="Image Settings" /></td>
<td>Image Settings</td>
<td><img src="image" alt="Face Detection" /></td>
<td>Face Detection</td>
<td><img src="image" alt="Live View Strategy" /></td>
<td>Live View Strategy</td>
</tr>
<tr>
<td><img src="image" alt="Information" /></td>
<td>Information</td>
<td><img src="image" alt="Close" /></td>
<td>Close</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Instant Playback only shows the record in last five minutes. If no record is found, it means there is no record during the last five minutes.

Digital Zoom can zoom in the selected area to the full screen. You can left-click and draw to select the area to zoom in, as shown in Figure 3.3.
Image Settings icon can be selected to enter the Image Settings menu.

You can set the image parameters like brightness, contrast, saturation and hue according to the actual demand.

![Image Settings - Customize](image1.png)

Live View Strategy can be selected to set strategy, including Real-time, Balanced, Fluency.

![Live View Strategy](image2.png)

Face detection function can be used to detect the human faces in live view mode and save in HDD. When
there are human faces with the specified size detected in the front of the camera, the device will capture the human face and save in HDD.

Move the mouse onto the icon to show the real-time stream information, including the frame rate, bitrate, resolution and stream type.

Figure 3. 6 Information
3.3 Adjusting Live View Settings

Purpose:
Live View settings can be customized according to different needs. You can configure the output interface, dwell time for screen to be shown, mute or turning on the audio, the screen number for each channel, etc.

Steps:
1. Enter the Live View Settings interface.
   Menu> Configuration> Live View

![Figure 3.7 Live View-General](image)

The settings available in this menu include:

- **Video Output Interface**: Designates the output to configure the settings for. The DS-9600NI-I8 provides VGA/HDMI and VGA2/HDMI2 and DS-7600NI-I2 (/P) and DS-7700NI-I4 (/P) provide the HDMI and VGA video outputs.
- **Live View Mode**: Designates the display mode to be used for Live View.
- **Dwell Time**: The time in seconds to dwell between switching of channels when enabling auto-switch in Live View.
- **Enable Audio Output**: Enables/disables audio output for the selected video output.
- **Volume**: Adjust the volume of live view, playback and two-way audio for the selected output interface.
- **Event Output**: Designates the output to show event video.
- **Full Screen Monitoring Dwell Time**: The time in seconds to show alarm event screen.

2. Setting Cameras Order
1) Select a View mode in including 1/4/6/8/16/25/32/36/64-window division modes are supported depending on different models.

2) Select the small window, and double-click on the channel number to display the channel on the window.

   You can click button to start live view for all the channels and click to stop all the live view.

3) Click the Apply button to save the setting.

You can also click-and-drag the camera to the desired window on the live view interface to set the camera order.
3.4 Channel-zero Encoding

*Purpose:*
Sometimes you need to get a remote view of many channels in real time from web browser or CMS (Client Management System) software, in order to decrease the bandwidth requirement without affecting the image quality, channel-zero encoding is supported as an option for you.

*Steps:*
1. Enter the **Live View** Settings interface.
   Menu > Configuration > Live View
2. Select the **Channel-Zero Encoding** tab.
   ![Figure 3.9 Live View - Channel-Zero Encoding](image)
3. Check the checkbox after **Enable Channel Zero Encoding**.
   After you set the Channel-Zero encoding, you can get a view in the remote client or web browser of 16 channels in one screen.
Chapter 4  PTZ Controls
4.1 Configuring PTZ Settings

**Purpose:**
Follow the procedure to set the parameters for PTZ. The configuring of the PTZ parameters should be done before you control the PTZ camera.

**Steps:**
1. Enter the PTZ Settings interface.
   - Menu >Camera > PTZ

   ![PTZ Settings Interface](image)

   **Figure 4.1 PTZ Settings**

2. Click the **PTZ Settings** button to set the PTZ parameters.

   ![PTZ Parameter Settings](image)

   **Figure 4.2 PTZ-General**

3. Choose the camera for PTZ setting in the **Camera** dropdown list.
4. Enter the parameters of the PTZ camera.

   ![NOTE](image)

   **All the parameters should be exactly the same as the PTZ camera parameters.**

5. Click **Apply** button to save the settings.
4.2 Setting PTZ Presets, Patrols & Patterns

Before you start:
Please make sure that the presets, patrols and patterns should be supported by PTZ protocols.

4.2.1 Customizing Presets

Purpose:
Follow the steps to set the Preset location which you want the PTZ camera to point to when an event takes place.

Steps:
1. Enter the PTZ Control interface.
   Menu>Camera>PTZ

   ![PTZ Settings](image)

   Figure 4.3 PTZ Settings

2. Use the directional button to wheel the camera to the location where you want to set preset; and the zoom and focus operations can be recorded in the preset as well.
3. Enter the preset No. (1-255) in the preset text field, and click the Set button to link the location to the preset.
   Repeat the steps2-3 to save more presets.
   You can click the Clear button to clear the location information of the preset, or click the Clear All button to clear the location information of all the presets.

4.2.2 Calling Presets

Purpose:
This feature enables the camera to point to a specified position such as a window when an event takes place.

Steps:
1. Click the button **PTZ** in the lower-right corner of the PTZ setting interface;
   Or press the PTZ button on the front panel or click the PTZ Control icon in the quick setting bar, or select the PTZ option in the right-click menu to show the PTZ control panel.

2. Choose **Camera** in the dropdown list.

3. Click the button to show the general settings of the PTZ control.

4. Click to enter the preset No. in the corresponding text field.

5. Click the **Call Preset** button to call it.

### 4.2.3 Customizing Patrols

**Purpose:**
Patrols can be set to move the PTZ to different key points and have it stay there for a set duration before moving on to the next key point. The key points are corresponding to the presets. The presets can be set following the steps above in *Customizing Presets*.

**Steps:**
1. Enter the PTZ Control interface.
   Menu>Camera>PTZ

![Figure 4. 5 PTZ Settings](image)

---

59
2. Select patrol No. in the drop-down list of patrol.
3. Click the **Set** button to add key points for the patrol.

![Key point Configuration](image)

**Figure 4. 6 Key point Configuration**

4. Configure key point parameters, such as the key point No., duration of staying for one key point and speed of patrol. The key point is corresponding to the preset. The **Key Point No.** determines the order at which the PTZ will follow while cycling through the patrol. The **Duration** refers to the time span to stay at the corresponding key point. The **Speed** defines the speed at which the PTZ will move from one key point to the next.

5. Click the **Add** button to add the next key point to the patrol, or you can click the **OK** button to save the key point to the patrol.

You can delete all the key points by clicking the **Clear** button for the selected patrol, or click the **Clear All** button to delete all the key points for all patrols.

### 4.2.4 Calling Patrols

**Purpose:**
Calling a patrol makes the PTZ to move according the predefined patrol path.

**Steps:**
1. Click the button **PTZ** in the lower-right corner of the PTZ setting interface;
   - Or press the PTZ button on the front panel or click the PTZ Control icon in the quick setting bar, or select the PTZ option in the right-click menu to show the PTZ control panel.
2. Click the **General** button to show the general settings of the PTZ control.

![PTZ Panel - General](image)

**Figure 4. 7 PTZ Panel - General**

3. Select a patrol in the dropdown list and click the **Call Patrol** button to call it.
4. You can click the Stop Patrol button to stop calling it.

4.2.5 Customizing Patterns

**Purpose:**
Patterns can be set by recording the movement of the PTZ. You can call the pattern to make the PTZ movement according to the predefined path.

**Steps:**
1. Enter the PTZ Control interface.
   Menu > Camera > PTZ

![Figure 4.8 PTZ Settings](image)

2. Choose pattern number in the dropdown list.
3. Click the Start button and click corresponding buttons in the control panel to move the PTZ camera, and click the Stop button to stop it.
   The movement of the PTZ is recorded as the pattern.

4.2.6 Calling Patterns

**Purpose:**
Follow the procedure to move the PTZ camera according to the predefined patterns.

**Steps:**
1. Click the button PTZ in the lower-right corner of the PTZ setting interface;
   Or press the PTZ button on the front panel or click the PTZ Control icon in the quick setting bar, or select the PTZ option in the right-click menu to show the PTZ control panel.
2. Click the button to show the general settings of the PTZ control.
3. Click the **Call Pattern** button to call it.

4. Click the **Stop Pattern** button to stop calling it.

### 4.2.7 Customizing Linear Scan Limit

**Purpose:**

The Linear Scan can be enabled to trigger the scan in the horizontal direction in the predefined range.

![NOTE](image)

This function is supported by some certain models.

**Steps:**

1. Enter the PTZ Control interface.
   
   Menu > Camera > PTZ

2. Use the directional button to wheel the camera to the location where you want to set the limit, and click the **Left Limit** or **Right Limit** button to link the location to the corresponding limit.
The speed dome starts linear scan from the left limit to the right limit, and you must set the left limit on the left side of the right limit, as well the angle from the left limit to the right limit should be no more than 180°.

4.2.8 Calling Linear Scan

Before operating this function, make sure the connected camera supports the linear scan and is in HIKVISION protocol.

**Purpose:**
Follow the procedure to call the linear scan in the predefined scan range.

**Steps:**
1. Click the button PTZ in the lower-right corner of the PTZ setting interface; or press the PTZ button on the front panel or click the PTZ Control icon in the quick setting bar to enter the PTZ setting menu in live view mode.
2. Click the button to show the one-touch function of the PTZ control.
3. Click **Linear Scan** button to start the linear scan and click the Linear Scan button again to stop it.
   You can click the **Restore** button to clear the defined left limit and right limit data and the dome needs to reboot to make settings take effect.

4.2.9 One-touch Park

Before operating this function, make sure the connected camera supports the linear scan and is in HIKVISION protocol.

**Purpose:**
For some certain model of the speed dome, it can be configured to start a predefined park action (scan, preset, patrol and etc.) automatically after a period of inactivity (park time).
Steps:

1. Click the button **PTZ** in the lower-right corner of the PTZ setting interface;  
   Or press the PTZ button on the front panel or click the PTZ Control icon in the quick setting bar to enter the PTZ setting menu in live view mode.

2. Click the button to show the one-touch function of the PTZ control.

![PTZ Panel - One-touch](image)

3. There are 3 one-touch park types selectable, click the corresponding button to activate the park action.
   - **Park (Quick Patrol):** The dome starts patrol from the predefined preset 1 to preset 32 in order after the park time. The undefined preset will be skipped.
   - **Park (Patrol 1):** The dome starts move according to the predefined patrol 1 path after the park time.
   - **Park (Preset 1):** The dome moves to the predefined preset 1 location after the park time.

   ![NOTE](image)
   
   The park time can only be set through the speed dome configuration interface, by default the value is 5s.

4. Click the button again to inactivate it.
4.3 PTZ Control Panel

To enter the PTZ control panel, there are two ways supported.

**OPTION 1:**
In the PTZ settings interface, click the **PTZ** button on the lower-right corner which is next to the Back button.

**OPTION 2:**
In the Live View mode, you can press the PTZ Control button on the front panel or on the remote control, or choose the PTZ Control icon ![icon](image), or select the PTZ option in the right-click menu.

Click the **Configuration** button on the control panel, and you can enter the PTZ Settings interface.

In PTZ control mode, the PTZ panel will be displayed when a mouse is connected with the device. If no mouse is connected, the ![icon](image) icon appears in the lower-left corner of the window, indicating that this camera is in PTZ control mode.

Chapter 5 Recording and Capture Settings
The capture is supported by DS-9600NI-I8 only.

5.1 Configuring Parameters

**Purpose:**
By configuring the parameters you can define the parameters which affect the image quality, such as the transmission stream type, the resolution and so on.

**Before you start:**
1. Make sure that the HDD has already been installed. If not, please install a HDD and initialize it. (Menu>HDD>General)

![Figure 5.1 HDD- General](image1)

2. Check the storage mode of the HDD
   1) Click **Advanced** to check the storage mode of the HDD.
   2) If the HDD mode is **Quota**, please set the maximum record capacity and maximum picture capacity. For detailed information, see **Chapter Configuring Quota Mode**.
   3) If the HDD mode is **Group**, you should set the HDD group. For detailed information, see **Chapter Configuring HDD Group for Recording and Capture**.

![Figure 5.2 HDD- Advanced](image2)

**Steps:**
1. Enter the Record settings interface to configure the recording parameters:
   - Menu > Record > Parameters
2. Parameters Setting for Recording

   1) Select Record tab page to configure. You can configure the stream type, the resolution, and other parameters on your demand.
   
      - **Video Encode**: select the video encoding to H.265 or H.264.
      - **Enable H.264+ Mode**: check the checkbox to enable. Once enabled, the **Max. Bitrate Mode**, **Max. Bitrate(Kbps)** and **Max. Bitrate Range Recommend** are not configurable. Enabling it helps to ensure the high video quality with a lowered bitrate.

   ![Figure 5.3 Recording Parameters](image)

   The H.265 and H.264+ should be supported by the connected IP camera.

   2) Click the **More Settings** button to set the advanced parameters for recording and then click **OK** button to finish editing.

   ![Figure 5.4 More Settings](image)

   - **Pre-record**: The time you set to record before the scheduled time or event. For example, when an alarm triggered the recording at 10:00, if you set the pre-record time as 5 seconds, the camera records it at 9:59:55.
   - **Post-record**: The time you set to record after the event or the scheduled time. For example, when
an alarm triggered the recording ends at 11:00, if you set the post-record time as 5 seconds, it records till 11:00:05.

- **Expired Time:** The expired time is the longest time for a record file to be kept in the HDD, if the deadline is reached, the file will be deleted. You can set the expired time to 0, and then the file will not be deleted. The actual keeping time for the file should be determined by the capacity of the HDD.

- **Redundant Record/Capture:** Enabling redundant record or capture means you save the record and captured picture in the redundant HDD. See *Chapter Configuring Redundant Recording and Capture.*

- **Record Audio:** Check the checkbox to enable or disable audio recording.

- **Video Stream:** Main stream and sub-stream are selectable for recording. When you select sub-stream, you can record for a longer time with the same storage space.

3) Click **Apply** to save the settings.

You can enable the ANR (Automatic Network Replenishment) function via the web browser (Configuration > Camera Settings > Schedule Settings > Advanced) to save the recording files in the IP camera when the network is disconnected, and synchronize the files to the NVR when the network is resumed.

- The redundant record/capture is used when you want to save the record files or captured pictures in the redundant HDD. You must configure the redundant HDD in HDD settings. For detailed information, see *Chapter 13.4.2.*

3. **Parameters Settings for Sub-stream**

1) Enter the Sub-stream tab page.

2) Configure the parameters of the camera.

3) Click **Apply** to save the settings.

4. **Parameters Settings for Capture**

1) Select the **Capture** tab.
2) Configure the parameters.

3) Click **Apply** to save the settings.

The interval is the time period between two capturing actions. You can configure all the parameters on this menu on your demand.
5.2 Configuring Recording and Capture Schedule

Purpose:
Set the record schedule, and then the camera automatically starts/stops recording according to the configured schedule.

In this chapter, we take the record schedule procedure as an example, and the same procedure can be applied to configure schedule for both recording and capture. To schedule the automatic capture, you need to choose the Capture tab in the Schedule interface.

Steps:
1. Enter the Record Schedule interface.
   Menu>Record/Capture>Schedule
2. Configure Record Schedule
   1) Select Record/Capture Schedule.

![Figure 5. 7 Record Schedule]

Different recording types are marked in different color icons.

Continuous: scheduled recording.
Event: recording triggered by all event triggered alarm.
Motion: recording triggered by motion detection.
Alarm: recording triggered by alarm.
M/A: recording triggered by either motion detection or alarm.
M&A: recording triggered by motion detection and alarm.

You can delete the set schedule by clicking the None icon.
2) Choose the camera you want to configure.

3) Select the check box after the **Enable Schedule** item.

4) Click **Edit** button or click on the color icon under the edit button and draw the schedule line on the panel.

**Edit the schedule:**

I. In the message box, you can choose the day to which you want to set schedule.

![Recording Schedule Interface](image)

You can click the **button to set the accurate time of the schedule.

II. To schedule an all-day recording, check the checkbox after the **All Day** item.

![Edit Schedule](image)

III. To arrange other schedule, set the Start/End time for each period.

![NOTE](image)

Up to 8 periods can be configured for each day. And the time periods can’t be overlapped each other.

IV. Select the record type in the dropdown list.

![NOTE](image)

- To enable Motion, Alarm, M | A (motion or alarm), M & A (motion and alarm) and VCA (Video Content Analysis) triggered recording and capture, you must configure the motion detection settings, alarm input settings or VCA settings as well. For detailed information, refer to *Chapter 8.1* and *Chapter 9*.
- The VCA settings are only available to the smart IP cameras.

Repeat the above edit schedule steps to schedule recording or capture for other days in the week. If the schedule can also be applied to other days, click **Copy**.
V. Click **OK** to save setting and back to upper level menu.

VI. Click **Apply** in the Record Schedule interface to save the settings.

**Draw the schedule:**

I. Click on the color icons, you can choose the schedule type as continuous or event.

II. Click the **Apply** button to validate the settings.

3. (Optional) If the settings can also be used to other channels, click **Copy**, and then choose the channel to which you want to copy.

4. Click **Apply** to save the settings.
Figure 5. 12 Copy Schedule to Other Channels
5.3 Configuring Motion Detection Recording and Capture

Purpose:
Follow the steps to set the motion detection parameters. In the live view mode, once a motion detection event takes place, the NVR can analyze it and do many actions to handle it. Enabling motion detection function can trigger certain channels to start recording, or trigger full screen monitoring, audio warning, notify the surveillance center and so on. In this chapter, you can follow the steps to schedule a record which triggered by the detected motion.

Steps:
1. Enter the Motion Detection interface.
   Menu>Camera>Motion

   Figure 5. 13 Motion Detection

2. Configure Motion Detection:
   1) Choose camera you want to configure.
   2) Check the checkbox after Enable Motion Detection.
   3) Drag and draw the area for motion detection by mouse. If you want to set the motion detection for all the area shot by the camera, click Full Screen. To clear the motion detection area, click Clear.

   Figure 5. 14 Motion Detection- Mask

4) Click Settings, and the message box for channel information pop up.
5) Select the channels which you want the motion detection event to trigger recording.
6) Click Apply to save the settings.
7) Click OK to back to the upper level menu.
8) Exit the Motion Detection menu.

3. Edit the Motion Detection Record Schedule. For the detailed information of schedule configuration, see Chapter Configuring Recording and Capture Schedule.
5.4 Configuring Alarm Triggered Recording and Capture

Purpose:
Follow the procedure to configure alarm triggered recording or capture.

Steps:
1. Enter the Alarm setting interface.
   Menu > Configuration > Alarm

   ![Figure 5.16 Alarm Settings]

   1) Select Alarm Input number and configure alarm parameters.
   2) Choose N.O (normally open) or N.C (normally closed) for alarm type.
   3) Check the checkbox for Setting.
   4) Click Settings.

2. Click Alarm Input.

   ![Figure 5.17 Alarm Settings - Alarm Input]

1) Select Alarm Input number and configure alarm parameters.
2) Choose N.O (normally open) or N.C (normally closed) for alarm type.
3) Check the checkbox for Setting.
4) Click Settings.
5) Choose the alarm triggered recording channel.
6) Check the checkbox ✓ to select channel.
7) Click **Apply** to save settings.
8) Click **OK** to back to the upper level menu.

Repeat the above steps to configure other alarm input parameters.

If the settings can also be applied to other alarm inputs, click **Copy** and choose the alarm input number.

3. Edit the Alarm triggered record in the Record/Capture Schedule setting interface. For the detailed information of schedule configuration, see *Chapter Configuring Recording and Capture* Schedule.
5.5 Manual Recording and Continuous Capture

**Purpose:**
Follow the steps to set parameters for the manual recording and continuous capture. Using manual recording and continuous capture, you need to manually cancel the record and capture. The manual recording and manual continuous capture is prior to the scheduled recording and capture.

**Steps:**
1. Enter the Manual settings interface.
   - Menu> Manual
   - Or press the **REC/SHT** button on the front panel.

2. Enable the Manual Recording.
   1) Select **Record** on the left bar.
   2) Click the status button before camera number to change **Off** to **On**

   - Click the status button to change **On** to **Off**.

   ![Figure 5. 20 Manual Record](image)

   **NOTE**
   Green icon **On** means that the channel is configured the record schedule. After rebooting, all the manual records enabled will be canceled.

4. Enabling and disabling the continuous capture
   1) Select **Continuous Capture** on the left bar.

   ![Figure 5. 21 Continuous Capture](image)

   **NOTE**
   2) Click the status button before camera number to change **Off** to **On**
   3) Disable continuous capture.
   4) Click the status button to change **On** to **Off**.
Green icon ✨ means that the channel is configured the capture schedule. After rebooting, all the continuous capture will be canceled.
5.6 Configuring Holiday Recording and Capture

**Purpose:**
Follow the steps to configure the record or capture schedule on holiday for that year. You may want to have different plan for recording and capture on holiday.

**Steps:**
1. Enter the Record setting interface.
   - Menu > Record > Holiday

![Holiday Settings](image)

Figure 5. 22 Holiday Settings

2. Enable Edit Holiday schedule.
   1) Click ![Edit](image) to enter the Edit interface.

![Edit Holiday Settings](image)

Figure 5. 23 Edit Holiday Settings
2) Check the checkbox after **Enable Holiday**.
3) Select Mode from the dropdown list.
   There are three different modes for the date format to configure holiday schedule.
4) Set the start and end date.
5) Click **Apply** to save settings.
6) Click **OK** to exit the Edit interface.

3. Enter Record/Capture Schedule settings interface to edit the holiday recording schedule. See *Chapter 6.2 Configuring Recording and Capture Schedule*. 
5.7 Configuring Redundant Recording and Capture

Purpose:
Enabling redundant recording and capture, which means saving the record files and captured pictures not only in the R/W HDD but also in the redundant HDD, will effectively enhance the data safety and reliability.

Steps:
1. Enter HDD Information interface.
   Menu> HDD

2. Select the HDD and click to enter the Local HDD Settings interface.
   1) Set the HDD property to Redundancy.

   ![Figure 5.24 HDD General](image)

   Figure 5.24 HDD General

   2) Click Apply to save the settings.

   3) Click OK to back to the upper level menu.

   ![Figure 5.25 HDD General-Editing](image)

   Figure 5.25 HDD General-Editing

   You must set the Storage mode in the HDD advanced settings to Group before you set the HDD property to Redundant. For detailed information, please refer to Chapter 11.4.1 Setting HDD Property. There should be at least another HDD which is in Read/Write status.

3. Enter the Record setting interface.
   Menu> Record> Parameters
   1) Select Record tab.

   2) Click More Settings to enter the following interface.

   ![Figure](image)
3) Select Camera you want to configure in the drop-down list.
4) Check the checkbox of **Redundant Record/Capture**.
5) Click **OK** to save settings and back to the upper level menu.

Repeat the above steps for configuring other channels.
5.8 Configuring HDD Group for Recording and Capture

*Purpose:* You can group the HDDs and save the record files and captured pictures in certain HDD group.

*Steps:*

1. Enter HDD setting interface. 
   Menu>HDD

2. Select Advanced on the left side menu.

3. Select General in the left side menu

4. Click to enter editing interface.

5. Configuring HDD group.
   1) Choose a group number for the HDD group.
   2) Click Apply and then in the pop-up message box, click Yes to save your settings.
   3) Click OK to back to the upper level menu.

   Repeat the above steps to configure more HDD groups.

6. Choose the Channels which you want to save the record files and captured pictures in the HDD group.
   1) Select Advanced on the left bar.
   2) Choose Group number in the dropdown list of Record on HDD Group
   3) Check the channels you want to save in this group.
   4) Click Apply to save settings.

After having configured the HDD groups, you can configure the Recording and Capture settings following the procedure provided in Chapter 5.2-5.7.
5.9 Files Protection

Purpose:
You can lock the recording files or set the HDD property to Read-only to protect the record files from being overwritten.

5.9.1 Locking the Recording Files

Lock File when Playback

Steps:
1. Enter Playback interface.
   Menu> Playback
2. Check the checkbox of channel(s) in the channel list and then double-click to select a date on the calendar.

3. During playback, click the button to lock the current recording file.

   In the multi-channel playback mode, clicking the button will lock all the record files related to the playback channels.

4. You can click the button to pop up the file management interface. Click the Locked File tab to check and export the locked files.
In the File Management interface, you can also click 🚫 to change it to 🔐 to unlock the file and the file is not protected.

- **Lock File when Export**

  *Steps:*
  1. Enter Export setting interface.
     - Menu> Export
  2. Select the channels you want to search by checking the checkbox to ✔.
  3. Configure the record type, file type start/end time.
  4. Click **Search** to show the results.
5. Protect the record files.
   1) Find the record files you want to protect, and then click the \( \text{\(\text{\textbullet}\)} \) icon which will turn to \( \text{\(\text{\textbullet}\)} \) indicating that the file is locked.

   The record files of which the recording is still not completed cannot be locked.

   2) Click \( \text{\(\text{\textbullet}\)} \) to change it to \( \text{\(\text{\textbullet}\)} \) to unlock the file and the file is not protected.

   Figure 5. 33 Unlocking Attention

5.9.2 Setting HDD Property to Read-only

Steps:
1. Enter HDD setting interface.
   Menu> HDD

   Figure 5. 34 HDD General

   Click \( \text{\(\text{\textbullet}\)} \) to edit the HDD you want to protect.

   Figure 5. 35 HDD General- Editing

To edit HDD property, you need to set the storage mode of the HDD to Group. See Chapter Managing HDD Group.

3. Set the HDD property to Read-only.
4. Click OK to save settings and back to the upper level menu.
- You cannot save any files in a Read-only HDD. If you want to save files in the HDD, change the property to R/W.
- If there is only one HDD and is set to Read-only, the NVR can’t record any files. Only live view mode is available.
- If you set the HDD to Read-only when the NVR is saving files in it, then the file will be saved in next R/W HDD. If there is only one HDD, the recording will be stopped.
Chapter 6  Playback
6.1 Playing Back Record Files

6.1.1 Instant Playback

*Purpose:*  
Play back the recorded video files of a specific channel in the live view mode. Channel switch is supported.

*Instant playback by channel*

*Steps:*
Choose a channel in live view mode and click the button in the quick setting toolbar.

*NOTE*
In the instant playback mode, only record files recorded during the last five minutes on this channel will be played back.

![Instant Playback Interface](image)

Figure 6.1 Instant Playback Interface

6.1.2 Playing Back by Normal Search

*Playback by Channel*

1. Enter the Playback interface.
   
   Mouse: right click a channel in live view mode and select Playback from the menu, as shown in Figure 6.2.
Pressing numerical buttons will switch playback to the corresponding channels during playback process.

Playback by Time

**Purpose:**
Play back video files recorded in specified time duration. Multi-channel simultaneous playback and channel switch are supported.

**Steps:**
1. Enter playback interface.
   Menu>Playback
2. Check the checkbox of channel(s) in the channel list and then double-click to select a date on the calendar.

If there are record files for that camera in that day, in the calendar, the icon for that day is displayed as 📒.
Otherwise it is displayed as 🎥

**Playback Interface**

You can use the toolbar in the bottom part of Playback interface to control playing progress, as shown in Figure 6.4.

![Playback Interface](image)

**Figure 6.4 Playback Interface**

Click the channel(s) to execute simultaneous playback of multiple channels.

![Toolbar of Playback](image)

**Figure 6.5 Toolbar of Playback**

- The **2015-01-15 12:04:41 - 12-09-2014 14:11:21** indicates the start/end time of the record.
- Playback progress bar: use the mouse to click any point of the progress bar or drag the progress bar to locate specific frames.

### 6.1.3 Playing Back by Event Search

**Purpose:**
Play back record files on one or several channels searched out by event type (e.g., alarm input, motion detection and VCA).

**Steps:**
1. Enter the Playback interface.
   
   Menu>Playback
2. Select the **Event** in the drop-down list on the top-left side.
3. Select **Alarm Input**, **Motion** or **VCA** as the event type.

Here we take playback by VCA as the example.

![Motion Search Interface](image)

**Figure 6.6 Motion Search Interface**
4. Select the minor type of VCA from the drop-down list.

   For configuring the VCA recording, please refer to Chapter 5.4 Configuring VCA Event Recording and Capture.

5. Select the camera(s) for searching, and set the Start time and End time.

6. Click **Search** button to get the search result information. You may refer to the right-side bar for the result.

7. Click **Play** button to play back the file.

   **NOTE**: Pre-play and post-play can be configured.

8. Playback interface.

   The toolbar in the bottom part of Playback interface can be used to control playing process.

![Figure 6.7 Interface of Playback by Event](image)

You can click  or  button to select the previous or next event. Please refer to Table 6.1 for the description of buttons on the toolbar.

### 6.1.4 Playing Back by Tag

**Purpose:**

Video tag allows you to record related information like people and location of a certain time point during playback. You can use video tag(s) to search for record files and position time point.

**Before playing back by tag:**

1. Enter Playback interface.
   - Menu>Playback

2. Search and play back the record file(s). Refer to Chapter 6.1.1 for the detailed information about searching and playback of the record files.
Click **T** button to add default tag.  
Click **C** button to add customized tag and input tag name.  

![NOTE]

Max. 64 tags can be added to a single video file.  
3. Tag management.  
   Click **F** button to enter the File Management interface and click **Tag** to manage the tags. You can check, edit and delete tag(s).

![Figure 6. 9 Tag Management Interface]

**Playing back by Tag**

**Steps:**  
1. Select the **Tag** from the drop-down list in the Playback interface.  
2. Choose channels, edit start time and end time, and then click **Search** to enter Search Result interface.  
   ![NOTE] You can enter keyword in the textbox **Keyword** to search the tag on your command.
3. Click button to play back the selected tag file. You can click the Back button to back to the search interface.

![Figure 6.10 Interface of Playback by Tag](image)

**NOTE** Pre-play and post-play can be configured. You can click or button to select the previous or next tag. Please refer to Table 6.1 for the description of buttons on the toolbar.

### 6.1.5 Playing back by Smart Playback

**Purpose:**
The smart playback function provides an easy way to get through the less effective information. When you select the smart playback mode, the system will analyze the video containing the motion or VCA information, mark it with green color and play it in the normal speed while the video without motion will be played in the 16-time speed. The smart playback rules and areas are configurable.

**Before you start:**
To get the smart search result, the corresponding event type must be enabled and configured on the IP camera. Here we take the intrusion detection as an example.

1. Log in the IP camera by the web browser, and enable the intrusion detection by checking the checkbox of it. You may enter the motion detection configuration interface by Configuration> Advanced Configuration> Events> Intrusion Detection.

![Figure 6.11 Setting Intrusion Detection on IP Camera](image)

2. Configure the required parameters of intrusion detection, including area, arming schedule and linkage methods. Refer to the user manual of smart IP camera for detailed instructions.
Steps:
1. Enter Playback interface.
   
   Menu>Playback
2. Select the **Smart** in the drop-down list on the top-left side.
3. Select a camera in the camera list.
4. Select a date in the calendar and click the **play** button on the left toolbar to play the video file.

![Smart Playback Interface](image)

<td>Filter video files by setting the target characters</td>
</tr>
</tbody>
</table>

5. Set the rules and areas for smart search of VCA event or motion event.

- **Line Crossing Detection**

Select the ![button](image), and click on the image to specify the start point and end point of the line.

- **Intrusion Detection**

Click the ![button](image), and specify 4 points to set a quadrilateral region for intrusion detection. Only one region can be set.

- **Motion Detection**
Click the button and then click and draw the mouse to set the detection area manually. You can also click the button to set the full screen as the detection area.

6. You can click to configure the smart settings.

![Smart Settings](image)

**Figure 6.13 Smart Settings**

**Skip the Non-Related Video**: The non-related video will not be played if this function is enabled.

**Play Non-Related Video at**: Set the speed to play the non-related video. Max./8/4/1 are selectable.

**Play Related Video at**: Set the speed to play the related video. Max./8/4/1 are selectable.

![Note](image)

Pre-play and post-play is not available for the motion event type.

7. Click to search and play the matched video files.

8. (Optional) You can click to filter the searched video files by setting the target characters, including the gender and age of the human and whether he/she wears glasses.

![Result Filter](image)

**Figure 6.14 Set Result Filter**

### 6.1.6 Playing Back by System Logs

**Purpose:**

Play back record file(s) associated with channels after searching system logs.
Steps:
1. Enter Log Information interface.
   Menu>Maintenance>Log Information
2. Click Log Search tab to enter Playback by System Logs.
   Set search time and type and click Search button.

![System Log Search Interface](image)

Figure 6. 15 System Log Search Interface

3. Choose a log with record file and click button to enter Playback interface.

   ![Result of System Log Search](image)

Figure 6. 16 Result of System Log Search

   
   If there is no record file at the time point of the log, the message box “No result found” will pop up.

4. Playback interface.
The toolbar in the bottom part of Playback interface can be used to control playing process.

![Figure 6. 17 Interface of Playback by Log](image)

### 6.1.7 Playing Back External File

**Purpose:**
Perform the following steps to look up and play back files in the external devices.

**Steps:**
1. Enter Tag Search interface.
   
   Menu>Playback

2. Select the **External File** in the drop-down list on the top-left side.
   
   The files are listed in the right-side list.
   
   You can click the **Refresh** button to refresh the file list.

3. Select and click the **Play** button to play back it. And you can adjust the playback speed by clicking **>>** and **<<**.

![Figure 6. 18 Interface of External File Playback](image)
6.1.8 Playing Back by Sub-periods

**Purpose:**
The video files can be played in multiple sub-periods simultaneously on the screens.

**Steps:**
1. Enter Playback interface.
   Menu>Playback
2. Select **Sub-periods** from the drop-down list in the upper-left corner of the page to enter the Sub-periods Playback interface.
3. Select a date and start playing the video file.
4. Select the Split-screen Number from the dropdown list. Up to 16 screens are configurable.

![Figure 6. 19 Interface of Sub-periods Playback](image)

According to the defined number of split-screens, the video files on the selected date can be divided into average segments for playback. E.g., if there are video files existing between 16:00 and 22:00, and the 6-screen display mode is selected, then it can play the video files for 1 hour on each screen simultaneously.

6.1.9 Playing Back Pictures

**Purpose:**
The captured pictures stored in the HDDs of the device can be searched and viewed.

**Steps:**
1. Enter Playback interface.
   Menu>Playback
2. Select **Picture** from the drop-down list in the upper-left corner of the page to enter the Picture Playback interface.

3. Check ☑ checkbox to select the channel(s) and specify the start time and end time for search.

4. Click **Search** to enter Search Result interface.

   ![NOTE](image)

   Up to 4000 pictures can be displayed each time.

5. Choose a picture you want to view and click 📷 button.
   You can click **Back** to return to the search interface.

6. The toolbar in the bottom part of Playback interface can be used to control playing process.

   ![Figure 6. 20 Result of Picture Playback](image)

6.2 Auxiliary Functions of Playback

6.2.1 Playing Back Frame by Frame

**Purpose:**
Play video files frame by frame, in case of checking image details of the video when abnormal events happen.

**Steps:**
- **Using a Mouse:**
  Go to Playback interface.
  If you choose playback of the record file: click button until the speed changes to Single frame and one click on the playback screen represents playback of one frame.
  If you choose reverse playback of the record file: click button until the speed changes to Single frame and one click on the playback screen represents reverse playback of one frame. It is also feasible to use button in toolbar.
- **Using the Front Panel:**
  Click the button to set the speed to Single frame. One click on button, one click on the playback screen or Enter button on the front panel represents playback or reverse playback of one frame.

6.2.2 Digital Zoom

**Steps:**
1. Click the button on the playback control bar to enter Digital Zoom interface.
2. Use the mouse to draw a red rectangle and the image within it will be enlarged up to 16 times.
3. Right-click the image to exit the digital zoom interface.
6.2.3 File Management

You can manage the video clips, captured pictures in playback, locked files and tags you have added in the playback mode.

**Steps:**
1. Enter the playback interface.
2. Click on the toolbar to enter the file management interface.

![File Management Interface](image)

3. You can view the saved video clips, captured playback pictures, lock/unlock the files and edit the tags which you added in the playback mode.
4. If required, select the items and click **Export All** or **Export** to export the clips/pictures/files/tags to local storage device.

6.2.4 Reverse Playback of Multi-channel

**Purpose:**
You can play back record files of multi-channel reversely. Up to 16-ch (with 1280*720 resolution) simultaneous reverse playback is supported; up to 4-ch (with 1920*1080P resolution) simultaneous reverse playback is supported and up to 1-ch (with 2560*1920 resolution) reverse playback is supported.

**Note:**
We use the interface of DS-7700NI-ST series (unless stated) as example to describe the following settings.

**Steps:**
1. Enter Playback interface.
   - Menu>Playback
2. Check more than one checkboxes to select multiple channels and click to select a date on the calendar.
The record files will be marked by two lines on the process bar. The upper one indicates the record files of the selected channel; and the lower one indicates the record files of all the selected channels.

3. Click \( \text{ } \) to play back the record files reversely.
Chapter 7 Backup
7.1   Backing up Record Files

7.1.1   Quick Export

*Purpose:*  
Export record files to backup device(s) quickly.

*Steps:*  
1. Enter Video Export interface.  
   Menu>Export>Normal  
   Choose the channel(s) you want to back up and click **Quick Export** button.

   *NOTE* The time duration of record files on a specified channel cannot exceed one day. Otherwise, the message box “Max. 24 hours are allowed for quick export.” will pop up.

![Quick Export Interface](image)

2. Select the format of the log files to be exported. Up to 9 formats are selectable.  
3. Click the **Export** to start exporting.

*NOTE* Here we use USB Flash Drive and please refer to the next section Normal Backup for more backup devices supported by the NVR.
Stay in the Exporting interface until all record files are exported.

4. Check backup result.

Choose the record file in Export interface and click button 🌐 to check it.

**NOTE**

The Player player.exe will be exported automatically during record file export.

---

**Figure 7.2 Quick Export using USB1-1**

**Figure 7.3 Export Finished**

**Figure 7.4 Checkup of Quick Export Result Using USB1-1**
7.1.2 Backing up by Normal Video/Picture Search

Purpose:
The record files can be backup to various devices, such as USB devices (USB flash drives, USB HDDs, USB writer), SATA writer and e-SATA HDD.

NOTE
The eSATA HDD is supported by DS-9600NI-I8 series NVR only.

Backup using USB flash drives and USB HDDs
Steps:
1. Enter Export interface.
   Menu>Export>Normal/Picture
2. Select the cameras to search.
3. Set search condition and click Search button to enter the search result interface. The matched video files or pictures are displayed in Chart or List display mode.

Figure 7.5 Normal Video Search for Backup

4. Select video files or pictures from the Chart or List to export.
   Click to play the record file if you want to check it.
   Check the checkbox before the record files you want to back up.

NOTE
The size of the currently selected files is displayed in the lower-left corner of the window.
5. Export the video files or picture files.
   - Click **Export All** button to export all the files.
   - Or you can select recording files you want to back up, and click **Export** button to enter Export interface.

   ![Figure 7. 6 Result of Normal Video Search for Backup](image)

   **NOTE**

   If the inserted USB device is not recognized:
   - Click the **Refresh** button.
   - Reconnect device.
   - Check for compatibility from vendor.

   You can also format USB flash drives or USB HDDs via the device.

   ![Figure 7. 7 Export by Normal Video Search using USB Flash Drive](image)

   Stay in the Exporting interface until all record files are exported with pop-up message box “Export finished”.

111
The backup of video files using USB writer or SATA writer has the same operating instructions. Please refer to steps described above.

### 7.1.3 Backing up by Event Search

**Purpose:**
Back up event-related record files using USB devices (USB flash drives, USB HDDs, USB writer), SATA writer or eSATA HDD. Quick Backup and Normal Backup are supported.

**Steps:**
1. Enter Export interface.  
   Menu>Export>Event  
2. Select the cameras to search.  
3. Select the event type to alarm input, motion or VCA.
4. Set search condition and click **Search** button to enter the search result interface. The matched video files are displayed in Chart or List display mode.  
5. Select video files from the Chart or List interface to export.
6. Export the video files. Please refer to step 5 of Chapter 7.1.2 Backing up by Normal Video Search for details.

7.1.4 Backing up Video Clips or Captured Playback Pictures

**Purpose:**
You may also select video clips or captured pictures in playback mode to export directly during Playback, using USB devices (USB flash drives, USB HDDs, USB writer), SATA writer or eSATA HDD.

**Steps:**

1. Enter Playback interface.
   - Please refer to Chapter 6.1 Playing Back Record Files.
2. During playback, use buttons or in the playback toolbar to start or stop clipping record file(s); or use the button to capture pictures.
3. Click the to enter the file management interface.
7. Export the video clips or captured pictures in playback. Please refer to step 5 of Chapter 7.1.2 Backing up by Normal Video Search for details.

7.2 Managing Backup Devices

Management of USB flash drives, USB HDDs and eSATA HDDs

Steps:

1. Enter the Export interface.

![Storage Device Management](image.png)

Figure 7.12 Storage Device Management

2. Backup device management.
   
   Click **New Folder** button if you want to create a new folder in the backup device.
   
   Select a record file or folder in the backup device and click **Delete** button if you want to delete it.
   
   Click **Erase** button if you want to erase the files from a re-writable CD/DVD.
   
   Click **Format** button to format the backup device.

   **NOTE**

   If the inserted storage device is not recognized:
   
   - Click the **Refresh** button.
   - Reconnect device.
   - Check for compatibility from vendor.
7.3 Hot Spare Device Backup

**Purpose:**
The device can form an N+1 hot spare system. The system consists of several working devices and a hot spare device; when the working device fails, the hot spare device switches into operation, thus increasing the reliability of the system.

Please contact dealer for details of models which support the hot spare function.

**Before you start:**
At least 2 devices are online.
A bidirectional connection shown in the figure below is required to be built between the hot spare device and each working device.

![Figure 7.13 Building Hot Spare System](image)

---

7.3.1 Setting Hot Spare Device

- The camera connection will be disabled when the device works in the hot spare mode.
- It's highly recommended to restore the defaults of the device after switching the working mode of the hot spare device to normal mode to ensure the normal operation afterwards.

**Steps:**
1. Enter the Hot Spare settings interface.
   Menu > Configuration > Hot Spare
2. Set the Work Mode as Hot Spare Mode, click the **Apply** button to confirm the settings.
3. Reboot the device to make the change take effect.

![Figure 7.14 Reboot Attention](image)

4. Click the **Yes** button in the pop-up attention box.
7.3.2 Setting Working Device

Steps:
1. Enter the Hot Spare settings interface.
   Menu > Configuration > Hot Spare
2. Set the Work Mode as Normal Mode (default).
3. Check the checkbox of Enable to enable the hot spare function.
4. Enter the IP address and admin password of hot spare device.

![Figure 7.15 Setting Working Mode for Working device](image)

5. Click the Apply button to save the settings.

7.3.3 Managing Hot Spare System

Steps:
1. Enter the Hot Spare Settings interface of the hot spare device.
   Menu > Configuration > Hot Spare
   The connected working device is displayed on the device list.
2. Check the checkbox to select the working device from the device list, and click the Add button to link the working device to the hot spare device.

   **NOTE**
   A hot spare device can connect up to 32 working devices.
3. You can view the working status of the hot spare device on the Working Status list. When the working device works properly, the working status of the hot spare device is displayed as *No record*.

When the working device gets offline, the hot spare device will record the video of the IP Camera connected to the working device for backup, and the working status of the hot spare device is displayed as *Backing up*.

The record backing up can be functioned for 1 working device at a time.

When the working device comes online, the lost video files will be restored by the record synchronization function, and the working status of the hot spare device is displayed as *Synchronizing*.

The record synchronization function can be enabled for 1 working device at a time.
Figure 7. 19 Synchronizing
Chapter 8  Alarm Settings
8.1 Setting Motion Detection Alarm

**Steps:**

1. Enter Motion Detection interface of Camera Management and choose a camera you want to set up motion detection.

   Menu> Camera> Motion

   ![Motion Detection Setup Interface](image)
   
   "Figure 8. 1 Motion Detection Setup Interface"

2. Set up detection area and sensitivity.

   Tick “Enable Motion Detection”, use the mouse to draw detection area(s) and drag the sensitivity bar to set sensitivity.

   Click button and set alarm response actions.

3. Click Trigger Channel tab and select one or more channels which will start to record/capture or become full-screen monitoring when motion alarm is triggered, and click Apply to save the settings.

   ![Set Trigger Camera of Motion Detection](image)
   
   "Figure 8. 2 Set Trigger Camera of Motion Detection"

4. Set up arming schedule of the channel.

   1) Select Arming Schedule tab to set the arming schedule of handling actions for the motion detection.

   2) Choose one day of a week and up to eight time periods can be set within each day.

   3) Click Apply to save the settings.

   ![NOTE]
   
   "Time periods shall not be repeated or overlapped."
5. Click **Handling** tab to set up alarm response actions of motion alarm (please refer to *Chapter Setting Alarm Response Actions*).

6. If you want to set motion detection for another channel, repeat the above steps or just click **Copy** in the Motion Detection interface to copy the above settings to it.
8.2 Setting Sensor Alarms

Purpose:
Set the handling action of an external sensor alarm.

Steps:
1. Enter Alarm Settings of System Configuration and select an alarm input.
   
   Menu> Configuration> Alarm
   
   Select Alarm Input tab to enter Alarm Input Settings interface.

   ![Figure 8.4 Alarm Status Interface of System Configuration](image)

   Figure 8.4 Alarm Status Interface of System Configuration

2. Set up the handling action of the selected alarm input.
   
   Check the Enable checkbox and click Settings button to set up its alarm response actions.

   ![Figure 8.5 Alarm Input Setup Interface](image)

   Figure 8.5 Alarm Input Setup Interface

3. Select Trigger Channel tab and select one or more channels which will start to record/capture or become full-screen monitoring when an external alarm is input, and click Apply to save the settings.

4. Select Arming Schedule tab to set the arming schedule of handling actions.
Choose one day of a week and Max. eight time periods can be set within each day, and click **Apply** to save the settings.

![NOTE](image)

Time periods shall not be repeated or overlapped.
Repeat the above steps to set up arming schedule of other days of a week. You can also use **Copy** button to copy an arming schedule to other days.

5. Select **Linkage Action** tab to set up alarm response actions of the alarm input (please refer to Chapter Setting Alarm Response Actions).

6. If necessary, select PTZ Linking tab and set PTZ linkage of the alarm input.
   Set PTZ linking parameters and click **OK** to complete the settings of the alarm input.
   ![NOTE](image)
   Please check whether the PTZ or speed dome supports PTZ linkage.
   One alarm input can trigger presets, patrol or pattern of more than one channel. But presets, patrols and patterns are exclusive.

7. If you want to set handling action of another alarm input, repeat the above steps.
   Or you can click the **Copy** button on the Alarm Input Setup interface and check the checkbox of alarm inputs.
to copy the settings to them.

![Figure 8. 8 Copy Settings of Alarm Input](image-url)
8.3 Detecting Video Loss Alarm

Purpose:
Detect video loss of a channel and take alarm response action(s).

Steps:
1. Enter Video Loss interface of Camera Management and select a channel you want to detect.
   Menu> Camera> Video Loss

   ![Video Loss Setup Interface](image)
   Figure 8.9 Video Loss Setup Interface

2. Set up handling action of video loss.
   - Check the checkbox of “Enable Video Loss Alarm”, and click button to set up handling action of video loss.

3. Set up arming schedule of the handling actions.
   - Select Arming Schedule tab to set the channel’s arming schedule.
   - Choose one day of a week and up to eight time periods can be set within each day.
   - Click **Apply** button to save the settings.

   ![Set Arming Schedule of Video Loss](image)
   Figure 8.10 Set Arming Schedule of Video Loss

   - Time periods shall not be repeated or overlapped.

4. Select **Linkage Action** tab to set up alarm response action of video loss (please refer to Chapter Setting Alarm Response Actions).
5. Click the OK button to complete the video loss settings of the channel.
8.4 Detecting Video Tampering Alarm

**Purpose:**
Trigger alarm when the lens is covered and take alarm response action(s).

**Steps:**
1. Enter Video Tampering interface of Camera Management and select a channel you want to detect video tampering.
   
   Menu> Camera> Video Tampering

![Video Tampering Setting Interface](image)

2. Set the video tampering handling action of the channel.
   
   Check the checkbox of “Enable Video Tampering Detection”.
   
   Drag the sensitivity bar to set a proper sensitivity level. Use the mouse to draw an area you want to detect video tampering.
   
   Click button to set up handling action of video tampering.

3. Set arming schedule and alarm response actions of the channel.
   
   1) Click Arming Schedule tab to set the arming schedule of handling actions.
   2) Choose one day of a week and Max. eight time periods can be set within each day.
   3) Click **Apply** button to save the settings.

   **NOTE**

   Time periods shall not be repeated or overlapped.
4. Select **Linkage Action** tab to set up alarm response actions of video tampering alarm (please refer to Chapter Setting Alarm Response Actions).

5. Click the **OK** button to complete the video tampering settings of the channel.
8.5 Handling Exceptions Alarm

*Purpose*: Exception settings refer to the handling action of various exceptions, e.g.

- **HDD Full**: The HDD is full.
- **HDD Error**: Writing HDD error or unformatted HDD.
- **Network Disconnected**: Disconnected network cable.
- **IP Conflicted**: Duplicated IP address.
- **Illegal Login**: Incorrect user ID or password.
- **Record/Capture Exception**: No space for saving recorded files or captured images.
- **Hot Spare Exception**: Disconnected with the working device.

*Steps*:

Enter Exception interface of System Configuration and handle various exceptions.

Menu > Configuration > Exceptions

Please refer to *Chapter Setting Alarm Response Actions* for detailed alarm response actions.

![Figure 8. 13 Exceptions Setup Interface](image_url)
8.6 Setting Alarm Response Actions

**Purpose:**
Alarm response actions will be activated when an alarm or exception occurs, including Event Hint Display, Full Screen Monitoring, Audible Warning (buzzer), Notify Surveillance Center, Trigger Alarm Output and Send Email.

**Event Hint Display**
When an event or exception happens, a hint can be displayed on the lower-left corner of live view image. And you can click the hint icon to check the details. Besides, the event to be displayed is configurable.

**Steps:**
1. Enter the Exception settings interface.
   Menu > Configuration > Exceptions
2. Check the checkbox of **Enable Event Hint**.

![Figure 8. 14 Event Hint Settings Interface](image)

3. Click the ![Icon](image) to set the type of event to be displayed on the image.

![Figure 8. 15 Event Hint Settings Interface](image)

4. Click the **OK** button to finish settings.

**Full Screen Monitoring**
When an alarm is triggered, the local monitor (VGA, HDMI or BNC monitor) display in full screen the video image from the alarming channel configured for full screen monitoring.

If alarms are triggered simultaneously in several channels, their full-screen images will be switched at an interval of 10 seconds (default dwell time). A different dwell time can be set by going to Menu > Configuration > Live View > Full Screen Monitoring Dwell Time.

Auto-switch will terminate once the alarm stops and you will be taken back to the Live View interface.
You must select during “Trigger Channel” settings the channel(s) you want to make full screen monitoring.

**Audible Warning**
Trigger an audible *beep* when an alarm is detected.

**Notify Surveillance Center**
Sends an exception or alarm signal to remote alarm host when an event occurs. The alarm host refers to the PC installed with Remote Client.

*NOTE*  
The alarm signal will be transmitted automatically at detection mode when remote alarm host is configured. Please refer to *Chapter 11.2.6 Configuring More Settings* for details of alarm host configuration.

**Email Linkage**
Send an email with alarm information to a user or users when an alarm is detected. Please refer to *Chapter 11.2.8 Configuring Email* for details of Email configuration.

**Trigger Alarm Output**
Trigger an alarm output when an alarm is triggered.

1. Enter Alarm Output interface.  
   Menu> Configuration> Alarm> Alarm Output  
   Select an alarm output and set alarm name and dwell time. Click *Schedule* button to set the arming schedule of alarm output.

   *NOTE*  
   If “Manually Clear” is selected in the dropdown list of Dwell Time, you can clear it only by going to Menu> Manual> Alarm.

   ![Figure 8. 16 Alarm Output Setup Interface]

2. Set up arming schedule of the alarm output.  
   Choose one day of a week and up to 8 time periods can be set within each day.

   *NOTE*  
   Time periods shall not be repeated or overlapped.
3. Repeat the above steps to set up arming schedule of other days of a week. You can also use Copy button to copy an arming schedule to other days.

   Click the OK button to complete the video tampering settings of the alarm output No.

4. You can also copy the above settings to another channel.
8.7 Triggering or Clearing Alarm Output Manually

Purpose:
Sensor alarm can be triggered or cleared manually. If “Manually Clear” is selected in the dropdown list of dwell time of an alarm output, the alarm can be cleared only by clicking Clear button in the following interface.

Steps:
Select the alarm output you want to trigger or clear and make related operations.

Menu> Manual> Alarm
Click Trigger/Clear button if you want to trigger or clear an alarm output.
Click Trigger All button if you want to trigger all alarm outputs.
Click Clear All button if you want to clear all alarm output.

![Figure 8. 19 Clear or Trigger Alarm Output Manually](image)
Chapter 9  VCA Alarm
The NVR supports the VCA detection alarm (face detection, vehicle detection, line crossing detection and intrusion detection, region entrance detection, region exiting detection, loitering detection, people gathering detection, fast moving detection, parking detection, unattended baggage detection, object removal detection, audio loss exception detection, sudden change of sound intensity detection, and defocus detection) sent by IP camera. The VCA detection must be enabled and configured on the IP camera settings interface first.

- All VCA detection must be supported by the connected IP camera.
- Please refer to the User Manual of Network Camera for the detailed instructions for the all VCA detection types.

### 9.1 Face Recognition

**Steps:**
1. Enter the Face Detection settings interface.
   Menu> Camera> VCA
2. Check the checkbox of Enable **Face Recognition**.
3. Click **Save** to save the settings.

![Figure 9.1 Face Recognition](image)

### 9.2 Face Detection

**Purpose:**
Face detection function detects the face appears in the surveillance scene, and some certain actions can be taken when the alarm is triggered.

**Steps:**
1. Enter the VCA settings interface.
   Menu> Camera> VCA
2. Select the camera to configure the VCA.
   You can click the checkbox of **Save VCA Picture** to save the captured pictures of VCA detection.
3. Select the VCA detection type to **Face Detection**.
4. Check the **Enable** checkbox to enable this function.
5. Click **Rule Settings** to enter the face detection settings interface. Configure the trigger channel, arming schedule and linkage action for the face detection alarm. Please refer to step3~step5 of Chapter 8.1 Setting Motion Detection Alarm for detailed instructions.
6. Click the **Rule Settings** button to set the face detection rules. You can click-and-drag the slider to set the detection sensitivity.
   **Sensitivity:** Range [1-5]. The higher the value is, the more easily the face can be detected.

![Figure 9.3 Set Face Detection Sensitivity](image)

7. Click **Apply** to activate the settings.

### 9.3 Vehicle Detection

**Purpose:**

Vehicle Detection is available for the road traffic monitoring. In Vehicle Detection, the passed vehicle can be detected and the picture of its license plate can be captured. You can send alarm signal to notify the surveillance center and upload the captured picture to FTP server.

**Steps:**
1. Enter the VCA settings interface.
   - Menu> Camera> VCA
2. Select the camera to configure the VCA.
You can click the checkbox of **Save VCA Picture** to save the captured pictures of VCA detection.

3. Select the VCA detection type to **Vehicle Detection**.

4. Check the **Enable** checkbox to enable this function.

![Figure 9. 4 Set Vehicle Detection](image)

5. Click **Rule Settings** to configure the trigger channel, arming schedule and linkage actions for the Blacklist, Whitelist and Others.

6. Click the **Rule Settings** to enter the rule settings interface. Configure the lane, upload picture and overlay content settings. Up to 4 lanes are selectable.

![Figure 9. 5 Rule Settings](image)

7. Click **Save** to save the settings.

*NOTE*

Please refer to the User Manual of Network Camera for the detailed instructions for the vehicle detection.
9.4 Line Crossing Detection

Purpose:
This function can be used for detecting people, vehicles and objects cross a set virtual line. The line crossing direction can be set as bidirectional, from left to right or from right to left. And you can set the duration for the alarm response actions, such as full screen monitoring, audible warning, etc.

Steps:
1. Enter the VCA settings interface.
   Menu> Camera> VCA
2. Select the camera to configure the VCA.
   You can click the checkbox of Save VCA Picture to save the captured pictures of VCA detection.
3. Select the VCA detection type to Line Crossing Detection.
4. Check the Enable checkbox to enable this function.
5. Click to configure the trigger channel, arming schedule and linkage actions for the line crossing detection alarm.
6. Click the Rule Settings button to set the line crossing detection rules.
   1) Select the direction to A<-B, A->B or A<-B.
      A<-B: Only the arrow on the B side shows; when an object going across the configured line with both
direction can be detected and alarms are triggered.
      A->B: Only the object crossing the configured line from the A side to the B side can be detected.
      B->A: Only the object crossing the configured line from the B side to the A side can be detected.
   2) Click-and-drag the slider to set the detection sensitivity.
      Sensitivity: Range [1-100]. The higher the value is, the more easily the detection alarm can be triggered.
   3) Click-OK to save the rule settings and back to the line crossing detection settings interface.

7. Click and set two points in the preview window to draw a virtual line.
   You can use the to clear the existing virtual line and re-draw it.

Figure 9. 6 Set Line Crossing Detection Rules
Up to 4 rules can be configured.

Figure 9. 7 Draw Line for Line Crossing Detection

8. Click **Apply** to activate the settings.
9.5 Intrusion Detection

**Purpose:**
Intrusion detection function detects people, vehicle or other objects which enter and loiter in a pre-defined virtual region, and some certain actions can be taken when the alarm is triggered.

**Steps:**
1. Enter the VCA settings interface.
   Menu> Camera> VCA
2. Select the camera to configure the VCA.
   You can click the checkbox of **Save VCA Picture** to save the captured pictures of VCA detection.
3. Select the VCA detection type to **Intrusion Detection**.
4. Check the **Enable** checkbox to enable this function.
5. Click \(\square\) to configure the trigger channel, arming schedule and linkage actions for the line crossing detection alarm.
6. Click the **Rule Settings** button to set the intrusion detection rules. Set the following parameters.
   1) **Threshold**: Range [1s-10s], the threshold for the time of the object loitering in the region. When the duration of the object in the defined detection area is longer than the set time, the alarm will be triggered.
   2) Click-and-drag the slider to set the detection sensitivity.
      **Sensitivity**: Range [1-100]. The value of the sensitivity defines the size of the object which can trigger the alarm. The higher the value is, the more easily the detection alarm can be triggered.
   3) **Percentage**: Range [1-100]. Percentage defines the ratio of the in-region part of the object which can trigger the alarm. For example, if the percentage is set as 50%, when the object enters the region and occupies half of the whole region, the alarm is triggered.

   ![Figure 9.8 Set Intrusion Crossing Detection Rules](image)

   4) Click **OK** to save the rule settings and back to the line crossing detection settings interface.

7. Click \(\square\) and draw a quadrilateral in the preview window by specifying four vertexes of the detection region, and right click to complete drawing. Only one region can be configured.

   You can use the \(\square\) to clear the existing virtual line and re-draw it.
Up to 4 rules can be configured.

Figure 9.9 Draw Area for Intrusion Detection

8. Click **Apply** to save the settings.
9.6 Region Entrance Detection

**Purpose:**
Region entrance detection function detects people, vehicle or other objects which enter a pre-defined virtual region from the outside place, and some certain actions can be taken when the alarm is triggered.

**Steps:**
1. Enter the VCA settings interface.
   Menu> Camera> VCA
2. Select the camera to configure the VCA.
   You can click the checkbox of **Save VCA Picture** to save the captured pictures of VCA detection.
3. Select the VCA detection type to **Region Entrance Detection**.
4. Check the **Enable** checkbox to enable this function.
5. Click ![Rule Settings](image) to configure the trigger channel, arming schedule and linkage actions for the line crossing detection alarm.
6. Click the **Rule Settings** button to set the sensitivity of the region entrance detection.
   **Sensitivity:** Range [0-100]. The higher the value is, the more easily the detection alarm can be triggered.
7. Click ![Draw Line](image) and draw a quadrilateral in the preview window by specifying four vertexes of the detection region, and right click to complete drawing. Only one region can be configured.
   You can use the ![Clear All](image) to clear the existing virtual line and re-draw it.

![Figure 9. 10 Set Region Entrance Detection](image)

**NOTE**
Up to 4 rules can be configured.
8. Click **Apply** to save the settings.
9.7 Region Exiting Detection

**Purpose:**
Region exiting detection function detects people, vehicle or other objects which exit from a pre-defined virtual region, and some certain actions can be taken when the alarm is triggered.

- Please refer to the *Chapter 9.5 Region Entrance Detection* for operating steps to configure the region exiting detection.
- Up to 4 rules can be configured.

9.8 Loitering Detection

**Purpose:**
Loitering detection function detects people, vehicle or other objects which loiter in a pre-defined virtual region for some certain time, and a series of actions can be taken when the alarm is triggered.

- Please refer to the *Chapter 9.4 Intrusion Detection* for operating steps to configure the loitering detection.
- The **Threshold** [1s-10s] in the Rule Settings defines the time of the object loitering in the region. If you set the value as 5, alarm is triggered after the object loitering in the region for 5s; and if you set the value as 0, alarm is triggered immediately after the object entering the region.
- Up to 4 rules can be configured.

9.9 People Gathering Detection

**Purpose:**
People gathering detection alarm is triggered when people gather around in a pre-defined virtual region, and a series of actions can be taken when the alarm is triggered.

- Please refer to the *Chapter 9.4 Intrusion Detection* for operating steps to configure the people gathering detection.
- The **Percentage** in the Rule Settings defines the gathering density of the people in the region. Usually, when the percentage is small, the alarm can be triggered when small number of people gathered in the defined detection region.
- Up to 4 rules can be configured.

9.10 Fast Moving Detection

**Purpose:**
Fast moving detection alarm is triggered when people, vehicle or other objects move fast in a pre-defined virtual region, and a series of actions can be taken when the alarm is triggered.
Please refer to the Chapter 9.4 Intrusion Detection for operating steps to configure the fast moving detection.

- The Sensitivity in the Rule Settings defines the moving speed of the object which can trigger the alarm. The higher the value is, the more easily a moving object can trigger the alarm.
- Up to 4 rules can be configured.

## 9.11 Parking Detection

**Purpose:**
Parking detection function detects illegal parking in places such as highway, one-way street, etc., and a series of actions can be taken when the alarm is triggered.

Please refer to the Chapter 9.4 Intrusion Detection for operating steps to configure the parking detection.

- The Threshold[5s-20s] in the Rule Settings defines the time of the vehicle parking in the region. If you set the value as 10, alarm is triggered after the vehicle stay in the region for 10s.
- Up to 4 rules can be configured.

## 9.12 Unattended Baggage Detection

**Purpose:**
Unattended baggage detection function detects the objects left over in the pre-defined region such as the baggage, purse, dangerous materials, etc., and a series of actions can be taken when the alarm is triggered.

Please refer to the Chapter 9.4 Intrusion Detection for operating steps to configure the unattended baggage detection.

- The Threshold[5s-20s] in the Rule Settings defines the time of the objects left over in the region. If you set the value as 10, alarm is triggered after the object is left and stay in the region for 10s. And the Sensitivity defines the similarity degree of the background image. Usually, when the sensitivity is high, a very small object left in the region can trigger the alarm.
- Up to 4 rules can be configured.

## 9.13 Object Removal Detection

**Purpose:**
Object removal detection function detects the objects removed from the pre-defined region, such as the exhibits on display, and a series of actions can be taken when the alarm is triggered.
● Please refer to the *Chapter 9.4 Intrusion Detection* for operating steps to configure the object removal detection.

● The **Threshold** [5s-20s] in the Rule Settings defines the time of the objects removed from the region. If you set the value as 10, alarm is triggered after the object disappears from the region for 10s. And the **Sensitivity** defines the similarity degree of the background image. Usually, when the sensitivity is high, a very small object taken from the region can trigger the alarm.

● Up to 4 rules can be configured.

### 9.14 Audio Exception Detection

*Purpose:*
Audio exception detection function detects the abnormal sounds in the surveillance scene, such as the sudden increase / decrease of the sound intensity, and some certain actions can be taken when the alarm is triggered.

*Steps:*
1. Enter the VCA settings interface.
   
   Menu> Camera> VCA

2. Select the camera to configure the VCA.
   You can click the checkbox of **Save VCA Picture** to save the captured pictures of VCA detection.

3. Select the VCA detection type to **Audio Exception Detection**.

4. Click **Rule Settings** button to set the audio exception rules.

5. Click the Rule Settings button to set the audio exception rules.

![Figure 9.11 Set Audio Exception Detection Rules](image)

1) Check the checkbox of **Audio Input Exception** to enable the audio loss detection function.

2) Check the checkbox of **Sudden Increase of Sound Intensity Detection** to detect the sound steep rise in the surveillance scene. You can set the detection sensitivity and threshold for sound steep rise.

   **Sensitivity**: Range [1-100], the smaller the value is, the more severe the change should be to trigger the detection.

   **Sound Intensity Threshold**: Range [1-100], it can filter the sound in the environment, the louder the environment sound, the higher the value should be. You can adjust it according to the real environment.

3) Check the checkbox of **Sudden Decrease of Sound Intensity Detection** to detect the sound steep drop in the surveillance scene. You can set the detection sensitivity[1-100] for sound steep drop.
6. Click Apply to activate the settings.

9.15 Sudden Scene Change Detection

Purpose:
Scene change detection function detects the change of surveillance environment affected by the external factors; such as the intentional rotation of the camera, and some certain actions can be taken when the alarm is triggered.

- Please refer to the Chapter 9.2 Face Detection for operating steps to configure the scene change detection.
- The Sensitivity in the Rule Settings ranges from 1 to 100, and the higher the value is, the more easily the change of scene can trigger the alarm.

9.16 Defocus Detection

Purpose:
The image blur caused by defocus of the lens can be detected, and some certain actions can be taken when the alarm is triggered.

- Please refer to the Chapter 9.2 Face Detection for operating steps to configure the defocus detection.
- The Sensitivity in the Rule Settings ranges from 1 to 100, and the higher the value is, the more easily the defocus image can trigger the alarm.

9.17 PIR Alarm

Purpose:
A PIR (Passive Infrared) alarm is triggered when an intruder moves within the detector's field of view. The heat energy dissipated by a person, or any other warm blooded creature such as dogs, cats, etc., can be detected.

Steps:
1. Enter the VCA settings interface.
   
   Menu> Camera> VCA
2. Select the camera to configure the VCA.
   
   You can click the checkbox of Save VCA Picture to save the captured pictures of VCA detection.
3. Select the VCA detection type to PIR Alarm.
4. Click to configure the trigger channel, arming schedule and linkage action for the PIR alarm.
5. Click the Rule Settings button to set the rules. Please refer to the Chapter 9.2 Face Detection for instructions.
6. Click Apply to activate the settings.
Chapter 10  VCA Search
With the configured VCA detection, the NVR supports the VCA search for the behavior analysis, face capture, people counting and heat map results.

## 10.1 Face Search

### Purpose:
When there are detected face picture captured and saved in HDD, you can enter the Face Search interface to search the picture and play the picture related video file according to the specified conditions.

### Before you start:
Please refer to Chapter 9.2 Face Detection for configuring the face detection.

### Steps:
1. Enter the **Face Search** interface.
   
   Menu > VCA Search > Face Search

2. Select the camera(s) for the face search.

3. Specify the start time and end time for search the captured face pictures or video files.

4. Click **Search** to start searching. The search results of face detection pictures are displayed in list or in chart.

![Face Search Interface](image.png)  

**Figure 10.1 Face Search**
5. Play the face picture related video file.
   You can double click on a face picture to play its related video file in the view window on the top right, or select a picture item and click `▶` to play it.
   You can also click `⏸` to stop the playing, or click `◀ ▶` to play the previous/next file.

6. If you want to export the captured face pictures to local storage device, connect the storage device to the device and click Export All to enter the Export interface.
   Click Export to export all face pictures to the storage device.
   Please refer to Chapter 7 Backup for the operation of exporting files.
10.2 Behavior Search

**Purpose:**
The behavior analysis detects a series of suspicious behavior based on VCA detection, and certain linkage methods will be enabled if the alarm is triggered.

**Steps:**
1. Enter the **Behavior Search** interface.
   
   Menu> VCA Search > Behavior Search

2. Select the camera(s) for the behavior search.

3. Specify the start time and end time for searching the matched pictures.

4. Select the VCA detection type from the dropdown list, including the line crossing detection, intrusion detection, unattended baggage detection, object removal detection, region entrance detection, region exiting detection, parking detection, loitering detection, people gathering detection and fast moving detection.

5. Click **Search** to start searching. The search results of pictures are displayed in list or in chart.
6. Play the behavior analysis picture related video file.
   You can double click on a picture from the list to play its related video file in the view window on the top right, or select a picture item and click \( \text{Play} \) to play it.
   You can also click \( \text{Stop} \) to stop the playing, or click \( \text{Previous} \) / \( \text{Next} \) to play the previous/next file.

7. If you want to export the captured pictures to local storage device, connect the storage device to the device and click Export All to enter the Export interface.
   Click Export to export all pictures to the storage device.

### 10.3 Plate Search

**Purpose:** You can search and view the matched captured vehicle plate picture and related information according to the plate searching conditions including the start time/end time, country and plate No..

**Steps:**

1. Enter the **Plate Search** interface.
   Menu> VCA Search > Plate Search
2. Select the camera(s) for the plate search.
3. Specify the start time and end time for searching the matched plate pictures.
4. Select the country from the drop-down list for searching the location of the vehicle plate.
5. Input the plate No. in the field for search.
7. Click **Search** to start searching. The search results of detected vehicle plate pictures are displayed in list or in chart.

Please refer to the Step7-Step8 of Section 10.1 **Face Search** for the operation of the search results.

### 10.4 People Counting

**Purpose:**
The People Counting is used to calculate the number of people entered or left a certain configured area and form in daily/weekly/monthly/annual reports for analysis.

**Steps:**
1. Enter the **People Counting** interface.
   
   Menu> VCA Search > People Counting
2. Select the camera for the people counting.
4. Set the statistics time.
5. Click the **Counting** button to start people counting statistics.
6. You can click the Export button to export the statistics report in excel format.

10.5 Heat Map

Purpose:
Heat map is a graphical representation of data represented by colors. The heat map function is usually used to analyze the visit times and dwell time of customers in a configured area.

The heat map function must be supported by the connected IP camera and the corresponding configuration must be set.

Steps:
1. Enter the Heat Map interface.
   Menu > VCA Search > Heat Map
2. Select the camera for the heat map processing.
4. Set the statistics time.
5. Click the **Counting** button to export the report data and start heat map statistics, and the results are displayed in graphics marked in different colors.

![NOTE]

As shown in the figure above, red color block (255, 0, 0) indicates the most welcome area, and blue color block (0, 0, 255) indicates the less-popular area.

You can click the **Export** button to export the statistics report in excel format.
Chapter 11  Network Settings
11.1 Configuring General Settings

**Purpose:**
Network settings must be properly configured before you operate NVR over network.

**Steps:**
1. Enter the Network Settings interface.
   - Menu > Configuration > Network
2. Select the **General** tab.

![Network Settings Interface](image)

3. In the **General Settings** interface, you can configure the following settings: Working Mode, NIC Type, IPv4 Address, IPv4 Gateway, MTU and DNS Server.

   The valid value range of MTU is 500 ~ 9676.

   If the DHCP server is available, you can click the checkbox of **DHCP** to automatically obtain an IP address and other network settings from that server.

4. After having configured the general settings, click **Apply** button to save the settings.

**Working Mode**
Two 10M/100M/1000M NIC cards are provided and it allows the device to work in the Multi-address and Net-fault Tolerance modes.

**Multi-address Mode:** The parameters of the two NIC cards can be configured independently. You can select LAN1 or LAN2 in the NIC type field for parameter settings.

You can select one NIC card as default route. And then the system is connecting with the extranet the data will be forwarded through the default route.
**Net-fault Tolerance Mode:** The two NIC cards use the same IP address, and you can select the Main NIC to LAN1 or LAN2. By this way, in case of one NIC card failure, the device will automatically enable the other standby NIC card so as to ensure the normal running of the whole system.

<table>

Figure 11.2 Net Fault-tolerance Working Mode
11.2 Configuring Advanced Settings

11.2.1 Configuring PPPoE Settings

*Purpose:*  
Your NVR also allows access by Point-to-Point Protocol over Ethernet (PPPoE).

*Steps:*  
1. Enter the *Network Settings* interface.  
   Menu > Configuration > Network  
2. Select the *PPPoE* tab to enter the PPPoE Settings interface, as shown in Figure 11.3.  
   ![Figure 11.3 PPPoE Settings Interface](image)

3. Check the *PPPoE* checkbox to enable this feature.
4. Enter *User Name* and *Password* for PPPoE access.

   ![NOTE](image)  
   The User Name and Password should be assigned by your ISP.
5. Click the *Apply* button to save and exit the interface.
6. After successful settings, the system asks you to reboot the device to enable the new settings, and the PPPoE dial-up is automatically connected after reboot.

You can go to Menu > Maintenance > System Info > Network interface to view the status of PPPoE connection. Please refer to *Chapter Viewing System Information* for PPPoE status.

11.2.2 Configuring EZVIZ Cloud P2P

*Purpose:*  
EZVIZ Cloud P2P provides the mobile phone application and as well the service platform page to access and manage your connected NVR, which enables you to get a convenient remote access to the surveillance system.

*Steps:*  
1. Enter the *Network Settings* interface.  
   Menu > Configuration > Network  
2. Select the *Platform Access* tab to enter the EZVIZ Cloud P2P Settings interface.  
3. Check the *Enable* checkbox to activate this feature.
4. If required, select the checkbox of *Custom* and input the *Server Address*.
5. To turn the *Enable Stream Encryption* on, you can select its checkbox.
6. Enter the *Verification Code* of the device.

   ![NOTE](image)  
   The verification code consists of 6 capital letters and is located at the bottom of the DVR. You can also use the
scanning tool of your phone to quickly get the code by scanning the QR code below.

![QR Code](image)

Figure 11. 4 EZVIZ Cloud P2P Settings Interface

7. Click the **Apply** button to save and exit the interface.

After configuration, you can access and manage the NVR by your mobile phone on which the EZVIZ Cloud P2P application is installed or by the EZVIZ website (www.ezviz7.com).

![Note Icon]

For more operation instructions, please refer to the help file on the EZVIZ official website (www.ezviz7.com).

### 11.2.3 Configuring DDNS

**Purpose:**

If your NVR is set to use PPPoE as its default network connection, you may set Dynamic DNS (DDNS) to be used for network access.

Prior registration with your ISP is required before configuring the system to use DDNS.

**Steps:**

8. Enter the Network Settings interface.
   
   Menu > Configuration > Network

9. Select the **DDNS** tab to enter the DDNS Settings interface.

10. Check the **DDNS** checkbox to enable this feature.

11. Select **DDNS Type**. Five different DDNS types are selectable: IPServer, DynDNS, PeanutHull, NO-IP and HiDDNS.

   - **IPServer**: Input **Server Address** for IPServer.

![IPServer Settings Table](image)

Figure 11. 5 IPServer Settings Interface
• DynDNS:
  1) Enter Server Address for DynDNS (i.e. members.dyndns.org).
  2) In the Device Domain Name text field, enter the domain obtained from the DynDNS website.
  3) Enter the User Name and Password registered in the DynDNS website.

![DynDNS Settings Interface](image1)

• PeanutHull: Enter the User Name and Password obtained from the PeanutHull website.

![PeanutHull Settings Interface](image2)

• NO-IP:
  Enter the account information in the corresponding fields. Refer to the DynDNS settings.
  1) Enter Server Address for NO-IP.
  2) In the Device Domain Name text field, enter the domain obtained from the NO-IP website (www.no-ip.com).
  3) Enter the User Name and Password registered in the NO-IP website.

![NO-IP Settings Interface](image3)

• HiDDNS:
  1) The Server Address of the HiDDNS server appears by default: [www.hik-online.com](http://www.hik-online.com).
  2) Select your Area/Country in the dropdown list.
3) Enter the **Device Domain Name**. You can use the alias you registered in the HiDDNS server or define a new device domain name. If a new alias of the device domain name is defined in the NVR, it will replace the old one registered on the server. You can register the alias of the device domain name in the HiDDNS server first and then enter the alias to the **Device Domain Name** in the NVR; you can also enter the domain name directly on the NVR to create a new one.

![HiDDNS Settings Interface](image)

**Figure 11. 9 HiDDNS Settings Interface**

- **Register the device on the HiDDNS server.**

1) Go to the HiDDNS website: [www.hik-online.com](http://www.hik-online.com).

![Login Interface](image)

**Figure 11. 10 Login Interface**

2) Click **Register** to register an account if you do not have one and use the account to log in.
3) In the Device Management interface, click Add to register the device.

4) Input Device Serial No., Device Domain (Device Name) and HTTP Port. And click OK to add the device.

   Access the Device via Web Browser or Client Software

   After having successfully registered the device on the HiDDNS server, you can access your device via web browser or Client Software with the Device Domain (Device Name).

   OPTION 1: Access the Device via Web Browser

   Open a web browser, and enter http://www.hik-online.com/alias in the address bar. Alias refers to the Device Domain on the device or the Device Name on the HiDDNS server.

   Example: http://www.hik-online.com/nvr

   If you mapped the HTTP port on your router and changed it to port No. except 80, you have to enter http://www.hik-online.com/alias:HTTP port in the address bar to access the device. You can
refer to Chapter 9.2.11 for the mapped HTTP port No.

- **OPTION 2: Access the devices via iVMS4200**

  For iVMS-4200, in the Add Device window, select [HDDNS] and then edit the device information.

  **Nickname:** Edit a name for the device as you want.

  **Server Address:** www.hik-online.com

  **Device Domain Name:** It refers to the Device Domain Name on the device or the Device Name on the HiDDNS server you created.

  **User Name:** Enter the user name of the device.

  **Password:** Enter the password of the device.

![Access Device via iVMS4200](image)

**Figure 11.13 Access Device via iVMS4200**

12. Click the Apply button to save and exit the interface.

### 11.2.4 Configuring NTP Server

**Purpose:**
A Network Time Protocol (NTP) Server can be configured on your NVR to ensure the accuracy of system date/time.

**Steps:**
1. Enter the Network Settings interface.
   
   Menu > Configuration > Network

2. Select the NTP tab to enter the NTP Settings interface, as shown in Figure 11.14.

![NTP Settings Interface](image)

**Figure 11.14 NTP Settings Interface**

3. Check the Enable NTP checkbox to enable this feature.

4. Configure the following NTP settings:
   - **Interval:** Time interval between the two synchronizing actions with NTP server. The unit is minute.
   - **NTP Server:** IP address of NTP server.
• **NTP Port**: Port of NTP server.

5. Click the **Apply** button to save and exit the interface.

---

The time synchronization interval can be set from 1 to 10080 min, and the default value is 60 min. If the NVR is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the NVR is setup in a more customized network, NTP software can be used to establish a NTP server used for time synchronization.

### 11.2.5 Configuring SNMP

**Purpose:**
You can use SNMP protocol to get device status and parameters related information.

**Steps:**

1. Enter the Network Settings interface.
   
   Menu > Configuration > Network

2. Select the **SNMP** tab to enter the SNMP Settings interface, as shown in Figure 11.15.

   ![Figure 11.15 SNMP Settings Interface](image)

   **Figure 11.15 SNMP Settings Interface**

3. Check the **SNMP** checkbox to enable this feature.

4. Configure the following SNMP settings:
   
   • **Trap Address**: IP Address of SNMP host.
   
   • **Trap Port**: Port of SNMP host.

5. Click the **Apply** button to save and exit the interface.

---

Before setting the SNMP, please download the SNMP software and manage to receive the device information via SNMP port. By setting the Trap Address, the NVR is allowed to send the alarm event and exception message to the surveillance center.

### 11.2.6 Configuring More Settings

**Steps:**

1. Enter the Network Settings interface.
2. Select the More Settings tab to enter the More Settings interface.

Figure 11.16 More Settings Interface

3. Configure the remote alarm host, server port, HTTP port, multicast, RTSP port.
   - **Alarm Host IP/Port**: With a remote alarm host configured, the device will send the alarm event or exception message to the host when an alarm is triggered. The remote alarm host must have the CMS (Client Management System) software installed. The Alarm Host IP refers to the IP address of the remote PC on which the CMS (Client Management System) software (e.g., iVMS-4200) is installed, and the Alarm Host Port must be the same as the alarm monitoring port configured in the software (default port is 7200).
   - **Multicast IP**: The multicast can be configured to realize live view for more than the maximum number of cameras through network. A multicast address spans the Class-D IP range of 224.0.0.0 to 239.255.255.255. It is recommended to use the IP address ranging from 239.252.0.0 to 239.255.255.255. When adding a device to the CMS (Client Management System) software, the multicast address must be the same as the device’s multicast IP.
   - **RTSP Port**: The RTSP (Real Time Streaming Protocol) is a network control protocol designed for use in entertainment and communications systems to control streaming media servers. Enter the RTSP port in the text field of RTSP Port. The default RTSP port is 554, and you can change it according to different requirements.
   - **Server Port and HTTP Port**: Enter the Server Port and HTTP Port in the text fields. The default Server Port is 8000 and the HTTP Port is 80, and you can change them according to different requirements.
     
     **Note**: The Server Port should be set to the range of 2000-65535 and it is used for remote client software access. The HTTP port is used for remote IE access.

Figure 11.17 Configure More Settings

4. Click the Apply button to save and exit the interface.

**11.2.7 Configuring HTTPS Port**

*Purpose:*
HTTPS provides authentication of the web site and associated web server that one is communicating with, which protects against Man-in-the-middle attacks. Perform the following steps to set the port number of https.

**Example:**
If you set the port number as 443 and the IP address is 192.0.0.64, you may access the device by inputting `https://192.0.0.64:443` via the web browser.

The HTTPS port can be only configured through the web browser.

**Steps:**
1. Open web browser, input the IP address of device, and the web server will select the language automatically according to the system language and maximize the web browser.
2. Input the correct user name and password, and click **Login** button to log in the device.
3. Enter the HTTPS settings interface.
4. Create the self-signed certificate or authorized certificate.

   **OPTION 1:** Create the self-signed certificate
   1) Click the **Create** button to create the following dialog box.

   ![Create Self-signed Certificate](image)

   ![OK Cancel](image)

   2) Enter the country, host name/IP, validity and other information.
   3) Click **OK** to save the settings.
OPTION 2: Create the authorized certificate

1) Click the **Create** button to create the certificate request.
2) Download the certificate request and submit it to the trusted certificate authority for signature.
3) After receiving the signed valid certificate, import the certificate to the device.

5. There will be the certificate information after you successfully create and install the certificate.

![Image 1](image1.png)

Figure 11. 20 Installed Certificate Property

6. Check the checkbox to enable the HTTPS function.
7. Click the **Save** button to save the settings.

### 11.2.8 Configuring Email

**Purpose:**
The system can be configured to send an Email notification to all designated users if an alarm event is detected, etc., an alarm or motion event is detected or the administrator password is changed.

Before configuring the Email settings, the NVR must be connected to a local area network (LAN) that maintains an SMTP mail server. The network must also be connected to either an intranet or the Internet depending on the location of the e-mail accounts to which you want to send notification.

**Steps:**
1. Enter the Network Settings interface.
   
   Menu >Configuration> Network

2. Set the IPv4 Address, IPv4 Subnet Mask, IPv4 Gateway and the Preferred DNS Server in the Network Settings menu, as shown in Figure 11. 21.

![Image 2](image2.png)

Figure 11. 21 Network Settings Interface

3. Click **Apply** to save the settings.

4. Select the Email tab to enter the Email Settings interface.
5. Configure the following Email settings:

**Enable Server Authentication** (optional): Check the checkbox to enable the server authentication feature.

- **User Name**: The user name of sender’s account registered on the SMTP server.
- **Password**: The password of sender’s account registered on the SMTP server.
- **SMTP Server**: The SMTP Server IP address or host name (e.g., smtp.263xmail.com).
- **SMTP Port**: The SMTP port. The default TCP/IP port used for SMTP is 25.
- **Enable SSL** (optional): Click the checkbox to enable SSL if required by the SMTP server.
- **Sender**: The name of sender.
- **Sender’s Address**: The Email address of sender.
- **Select Receivers**: Select the receiver. Up to 3 receivers can be configured.
- **Receiver**: The name of user to be notified.
- **Receiver’s Address**: The Email address of user to be notified.
- **Enable Attached Picture**: Check the checkbox of **Enable Attached Picture** if you want to send email with attached alarm images. The interval is the time of two adjacent alarm images. You can also set SMTP port and enable SSL here.
- **Interval**: The interval refers to the time between two actions of sending attached pictures.

6. Click **Apply** button to save the Email settings.

7. You can click **Test** button to test whether your Email settings work. The corresponding Attention message box will pop up. Refer to Figure 11.23.

11.2.9 Configuring NAT

**Purpose:**

Two ways are provided for port mapping to realize the remote access via the cross-segment network, UPnP™ and
Universal Plug and Play (UPnP™) can permit the device seamlessly discover the presence of other network devices on the network and establish functional network services for data sharing, communications, etc. You can use the UPnP™ function to enable the fast connection of the device to the WAN via a router without port mapping.

**Before you start:**

If you want to enable the UPnP™ function of the device, you must enable the UPnP™ function of the router to which your device is connected. When the network working mode of the device is set as multi-address, the Default Route of the device should be in the same network segment as that of the LAN IP address of the router.

**Steps:**

1. Enter the Network Settings interface.
   
   **Menu > Configuration > Network**

2. Select the NAT tab to enter the port mapping interface.

3. Check the checkbox to enable UPnP™.

4. Select the Mapping Type as Manual or Auto in the drop-down list.

   **OPTION 1: Auto**

   If you select Auto, the Port Mapping items are read-only, and the external ports are set by the router automatically.

   **Steps:**

   1) Select **Auto** in the drop-down list of Mapping Type.

   2) Click **Apply** button to save the settings.

   3) You can click **Refresh** button to get the latest status of the port mapping.

   **OPTION 2: Manual**

   If you select Manual as the mapping type, you can edit the external port on your demand by clicking to activate the External Port Settings dialog box.

   **Steps:**

   1) 

   2) 

   3) 

Figure 11. 24 UPnP™ Settings Interface

Figure 11. 25 UPnP™ Settings Finished-Auto
1) Select **Manual** in the drop-down list of Mapping Type.

2) Click 📚 to activate the External Port Settings dialog box. Configure the external port No. for server port, http port, RTSP port and https port respectively.

   - You can use the default port No., or change it according to actual requirements.
   - External Port indicates the port No. for port mapping in the router.
   - The value of the RTSP port No. should be 554 or between 1024 and 65535, while the value of the other ports should be between 1 and 65535 and the value must be different from each other. If multiple devices are configured for the UPnP™ settings under the same router, the value of the port No. for each device should be unique.

   ![Figure 11. 26 External Port Settings Dialog Box](image)

3) Click **Apply** button to save the settings.

4) You can click **Refresh** button to get the latest status of the port mapping.

   ![Figure 11. 27 UPnP™ Settings Finished-Manual](image)

**Manual Mapping**

If your router does not support the UPnP™ function, perform the following steps to map the port manually in an easy way.

**Before you start:**

Make sure the router support the configuration of internal port and external port in the interface of Forwarding.

**Steps:**

1. Enter the Network Settings interface.
   
   Menu > Configuration > Network

2. Select the **NAT** tab to enter the port mapping interface.

3. Leave the Enable UPnP checkbox unchecked.

4. Click 📚 to activate the External Port Settings dialog box. Configure the external port No. for server port, http port, RTSP port and https port respectively.
The value of the RTSP port No. should be 554 or between 1024 and 65535, while the value of the other ports should be between 1 and 65535 and the value must be different from each other. If multiple devices are configured for the UPnP™ settings under the same router, the value of the port No. for each device should be unique.

![External Port Settings Dialog Box](image)

**Figure 11. 28 External Port Settings Dialog Box**

5. Click **OK** to save the setting for the current port and return to the upper-level menu.

6. Click **Apply** button to save the settings.

7. Enter the virtual server setting page of router; fill in the blank of Internal Source Port with the internal port value, the blank of External Source Port with the external port value, and other required contents.

![Setting Virtual Server Item](image)

**Figure 11. 29 Setting Virtual Server Item**

Each item should be corresponding with the device port, including server port, http port, RTSP port and https port.

The above virtual server setting interface is for reference only, it may be different due to different router manufactures. Please contact the manufacture of router if you have any problems with setting virtual server.

**11.2.10 Configuring High-speed Download**

*Purpose:*

You can enable the High-speed Download function to widen the outgoing bandwidth of the device. In this way you can speed up the download of record files through web browser or CMS software.

![Note](image)

If you enable the high-speed download function, the outgoing bandwidth of the device will be increased by 40Mbps and the local menu operation will be affected. It is recommended to disable this function after finishing the remote downloading of record files.

*Steps:*
1. Enter the Network Settings interface.
   Menu > Configuration > Network
2. Select the More Settings tab to enter the More Settings interface.
3. Check the checkbox of Enable High-speed Download. And click the OK button in the pop-up message box to confirm the settings.

![High-speed Download Settings Menu](image1)

Figure 11. 30 High-speed Download Settings Menu

![Message Box of High-speed Download](image2)

Figure 11. 31 Message Box of High-speed Download

4. Click Apply button to save and exit the interface.

### 11.2.11 Configuring Virtual Host

**Purpose:**
You can directly get access to the IP camera management interface after enabling this function.

![NOTE]

The Virtual host function can be only configured through the web browser.

**Steps:**
1. Enter the Advanced settings interface, as shown in the Figure 11. 32.

   Configuration > Remote Configuration > Network Settings > Advanced

![Advanced Settings Interface](image3)

Figure 11. 32 Advanced Settings Interface

2. Check the checkbox of the Enable Virtual Host.
3. Click the Save button to save the setting.
4. Enter the IP camera management interface of NVR. The Connect column appears on the right-most side of the camera list, as shown in the Figure 11. 33.

   Configuration > Remote Configuration > Camera Management > IP Camera
5. Click the link and the page of IP camera management appears.

### 11.3 Checking Network Traffic

**Purpose:**
You can check the network traffic to obtain real-time information of NVR such as linking status, MTU, sending/receiving rate, etc.

**Steps:**
1. Enter the Network Traffic interface.
   - Menu > Maintenance > Net Detect

2. You can view the sending rate and receiving rate information on the interface. The traffic data is refreshed every 1 second.
11.4 Configuring Network Detection

**Purpose:**
You can obtain network connecting status of NVR through the network detection function, including network delay, packet loss, etc.

### 11.4.1 Testing Network Delay and Packet Loss

**Steps:**
1. Enter the Network Traffic interface.
   Menu > Maintenance > Net Detect
2. Click the **Network Detection** tab to enter the Network Detection menu, as shown in Figure 11.35.

   ![Network Detection Interface](image)

   Figure 11.35 Network Detection Interface

3. Enter the destination address in the text field of **Destination Address**.
4. Click **Test** button to start testing network delay and packet loss. The testing result pops up on the window. If the testing is failed, the error message box will pop up as well. Refer to Figure 11.36.

   ![Testing Result of Network Delay and Packet Loss](image)

   Figure 11.36 Testing Result of Network Delay and Packet Loss

### 11.4.2 Exporting Network Packet

**Purpose:**
By connecting the NVR to network, the captured network data packet can be exported to USB-flash disk, SATA/eSATA, DVD-R/W and other local backup devices.

**Steps:**
1. Enter the Network Traffic interface.
   Menu > Maintenance > Net Detect
2. Click the **Network Detection** tab to enter the Network Detection interface.
3. Select the backup device from the dropdown list of Device Name, as shown in Figure 11.37.
Click **Refresh** button if the connected local backup device cannot be displayed. When it fails to detect the backup device, please check whether it is compatible with the NVR. You can format the backup device if the format is incorrect.

![Image](image1.png)

**Figure 11. 37 Export Network Packet**

4. Click **Export** button to start exporting.
5. After the exporting is complete, click **OK** to finish the packet export, as shown in Figure 11. 38.

![Image](image2.png)

**Figure 11. 38 Packet Export Attention**

---

**NOTE**

Up to 1M data can be exported each time.

### 11.4.3 Checking the Network Status

**Purpose:**
You can also check the network status and quick set the network parameters in this interface.

**Steps:**
- Click the **Status** button on the lower-right corner of the page.
If the network is normal the following message box pops out.

![Network Status Checking Result](image)

If the message box pops out with other information instead of this one, you can click Network button to show the quick setting interface of the network parameters.

11.4.4 Checking Network Statistics

*Purpose:*  
You can check the network status to obtain the real-time information of NVR.

*Steps:*  
1. Enter the Network Detection interface.  
   Menu>Maintenance>Net Detect  
2. Choose the Network Stat. tab.
3. Check the bandwidth of IP Camera, bandwidth of Remote Live View, bandwidth of Remote Playback, bandwidth of Net Receive Idle and bandwidth of Net Send Idle.

4. You can click **Refresh** to get the newest status.
Chapter 12  RAID
This chapter is applicable for DS-9600NI-I8 series NVR only.

12.1 Configuring Array

**Purpose:**
RAID (redundant array of independent disks) is a storage technology that combines multiple disk drive components into a logical unit. A RAID setup stores data over multiple hard disk drives to provide enough redundancy so that data can be recovered if one disk fails. Data is distributed across the drives in one of several ways called "RAID levels", depending on what level of redundancy and performance is required.

The NVR support the disk array which is realized by the software, and RAID0, RAID1, RAID5 and RAID 10 are supported. You can enable the RAID function on your demand.

**Before you start:**
Please install the HDD(s) properly and it is recommended to use the same enterprise-level HDDs (including model and capacity) for array creation and configuration so as to maintain reliable and stable running of the disks.

**Introduction:**
The NVR can store the data (such as record, picture, log information) in the HDD only after you have created the array or you have configured network HDD (refer to Chapter 13.2 Managing Network HDD). Our device provides two ways for creating array, including one-touch configuration and manual configuration. The following flow chart shows the process of creating array.

![Figure 12.1 RAID Working Flow](image-url)
### 12.1.1 Enable RAID

**Purpose:**
Perform the following steps to enable the RAID function, or the disk array cannot be created.

- **OPTION 1:**
  Enable the RAID function in the Wizard when the device startup, please refer to step 7 of Chapter 2.2.

- **OPTION 2:**
  Enable the RAID function in the HDD Management Interface.

**Steps:**
1. Enter the disk mode configuration interface.
   Menu > HDD > Advanced

![Enable RAID Interface](image)

   **Figure 12. 2 Enable RAID Interface**

2. Check the checkbox of **Enable RAID**.
3. Click the **Apply** button to save the settings.

### 12.1.2 One-touch Configuration

**Purpose:**
Through one-touch configuration, you can quickly create the disk array. By default, the array type to be created is RAID 5.

**Before you start:**
1. The RAID function should be enabled, please refer to the Chapter 13.1.1 for details.
2. As the default array type is RAID 5, please install at least 3 HDDs in you device.
3. If more than 10 HDDs are installed, 2 arrays can be configured.

**Steps:**
1. Enter the RAID configuration interface.
   Menu > HDD > RAID
2. Check the checkbox of corresponding HDD No. to select it.

3. Click the One-touch Create button to enter the One-touch Array Configuration interface.

4. Edit the array name in the Array Name text filed and click OK button to start configuring array.

   **NOTE**

   If you install 4 HDDs or above for one-touch configuration, a hot spare disk will be set by default. It is recommended to set hot spare disk for automatically rebuilding the array when the array is abnormal.

5. When the array configuration is completed, click OK button in the pop-up message box to finish the settings.

6. You can click Array tab to view the information of the successfully created array.

   **NOTE**

   By default, one-touch configuration creates an array and a virtual disk.
7. A created array displays as an HDD in the HDD information interface.

![HDD Information Interface]

Figure 12.6 HDD Information Interface

### 12.1.3 Manually Creating Array

**Purpose:**
You can manually create the array of RAID 0, RAID 1, RAID 5 and RAID 10.

**NOTE**
In this section, we take RAID 5 as an example to describe the manual configuration of array and virtual disk.

**Steps:**
1. Enter the Physical Disk Settings interface.
   - Menu > HDD > RAID > Physical Disk

![Physical Disk Settings Interface]

Figure 12.7 Physical Disk Settings Interface

2. Click **Create** button to enter the Create Array interface.
3. Edit the **Array Name**; set the **RAID Level** to RAID 0, RAID 1, RAID 5 or RAID 10; select the **Physical Disk** that you want to configure array.

- If you choose RAID 0, at least 2 HDDs must be installed.
- If you choose RAID 1, 2 HDDs need to be configured for RAID 1.
- If you choose RAID 5, at least 3 HDDs must be installed.
- If you choose RAID 10, the number of HDDs installed should be even in the range of 4~16.

4. Click **OK** button to create array.

If the number of HDDs you select is not compatible with the requirement of the RAID level, the error message box will pop up.

5. You can click **Array** tab to view the successfully created array.

---

**Figure 12. 8 Create Array Interface**

**Figure 12. 9 Error Message Box**

**Figure 12. 10 Array Settings Interface**
12.2 Rebuilding Array

*Purpose:*
The working status of array includes Functional, Degraded and Offline. By viewing the array status, you can take immediate and proper maintenance for the disks so as to ensure the high security and reliability of the data stored in the disk array.

When there is no disk loss in the array, the working status of array will change to Functional; when the number of lost disks has exceeded the limit, the working status of array will change to Offline; in other conditions, the working status is Degraded.

When the virtual disk is in Degraded status, you can restore it to Functional by array rebuilding.

*Before you start:*
Please make sure the hot spare disk is configured.

1. Enter the Physical Disk Settings interface to configure the hot spare disk.

   ![Physical Disk Settings Interface](image)
   
   Figure 12. 11 Physical Disk Settings Interface

2. Select a disk and click ![to set it as the hot spare disk.](image)

   *NOTE*
   Only global hot spare mode is supported.

**12.2.1 Automatically Rebuilding Array**

*Purpose:*
When the virtual disk is in Degraded status, the device can start rebuilding the array automatically with the hot spare disk to ensure the high security and reliability of the data.

*Steps:*
1. Enter the Array Settings interface. The status of the array is Degraded. Since the hot spare disk is configured, the system will automatically start rebuilding using it.

   Menu > HDD > RAID > Array
If there is no hot spare disk after rebuilding, it is recommended to install a HDD into the device and set it as a hot spare disk to ensure the high security and reliability of the array.

### 12.2.1 Manually Rebuilding Array

**Purpose:**
If you do not enable the Auto-rebuild in Firmware Settings interface (Menu>HDD>RAID>Firmware) or the hot spare disk has not been configured, then you can rebuild the array manually to restore the array when the virtual disk is in Degraded status.

**Steps:**
1. Enter the Array Settings interface. The disk 3 is lost.
   
   Menu > HDD > RAID > Array

   ![Figure 12. 13 Array Settings Interface](image)

2. Click Array tab to back to the Array Settings interface and click ![Rebuild](image) to configure the array rebuild.

   ![Figure 12. 14 Rebuild Array Interface](image)

   At least one available physical disk should exist for rebuilding the array.

3. Select the available physical disk and click **OK** button to confirm to rebuild the array.
4. The “Do not unplug the physical disk when it is under rebuilding” message box pops up. Click **OK** button to
start rebuilding.

5. You can enter the Array Settings interface to view the rebuilding status.

6. After rebuilding successfully, the array and virtual disk will restore to Functional.
12.3 Deleting Array

Deleting array will cause to delete all the data saved in the disk.

**Steps:**

1. Enter the Array Settings interface.

   Menu>HDD>RAID>Array

   ![Array Settings Interface](image)

   Figure 12. 15 Array Settings Interface

2. Select an array and click the delete button.

   ![Confirm Array Deletion](image)

   Figure 12. 16 Confirm Array Deletion

3. In the pop-up message box, click Yes button to confirm the array deletion.

   Deleting array will cause to delete all the data in the array.
12.4 Checking and Editing Firmware

**Purpose:**
You can view the information of the firmware and upgrade the firmware by local backup device or remote FTP server.

**Steps:**
1. Enter the Firmware interface to check the information of the firmware, including the version, maximum physical disk quantity, maximum array quantity, auto-rebuild status, etc.

![Firmware Interface](image)

Figure 12. 17 Firmware Interface

2. You can set the Background Task Speed in the drop-down list.
Chapter 13  HDD Management
13.1 Initializing HDDs

Purpose:
A newly installed hard disk drive (HDD) must be initialized before it can be used with your NVR. A message box pops up when the NVR starts up if there exits any uninitialized HDD.

Click Yes button to initialize it immediately or you can perform the following steps to initialize the HDD.

Steps:
1. Enter the HDD Information interface.
   Menu > HDD > General

2. Select HDD to be initialized.
3. Click the Init button.

4. Select the OK button to start initialization.

Figure 13. 1 Message Box of Uninitialized HDD

Figure 13. 2 HDD Information Interface

Figure 13. 3 Confirm Initialization

Figure 13. 4 Status changes to Initializing
5. After the HDD has been initialized, the status of the HDD will change from *Uninitialized* to *Normal*.

![HDD Information screenshot]

Figure 13. 5 HDD Status Changes to Normal

---

**NOTE**

Initializing the HDD will erase all data on it.
13.2 Managing Network HDD

*Purpose:*
You can add the allocated NAS or disk of IP SAN to NVR, and use it as network HDD. Up to 8 network disks can be added.

*Steps:*
1. Enter the HDD Information interface.
   Menu > HDD > General

   ![HDD Information Interface](image1)
   
   **Figure 13. 6 HDD Information Interface**

2. Click the Add button to enter the Add NetHDD interface, as shown in Figure 13. 7.

   ![Add NetHDD Interface](image2)
   
   **Figure 13. 7 HDD Information Interface**

3. Add the allocated NetHDD.
4. Select the type to NAS or IP SAN.
5. Configure the NAS or IP SAN settings.
   - **Add NAS disk:**
     1) Enter the NetHDD IP address in the text field.
     2) Click the Search button to search the available NAS disks.
     3) Select the NAS disk from the list shown below.
        Or you can just manually enter the directory in the text field of NetHDD Directory.
     4) Click the OK button to add the configured NAS disk.
• Add IP SAN:
  1) Enter the NetHDD IP address in the text field.
  2) Click the Search button to search the available IP SAN disks.
  3) Select the IP SAN disk from the list shown below.
  4) Click the OK button to add the selected IP SAN disk.

Up to 1 IP SAN disk can be added.

6. After having successfully added the NAS or IP SAN disk, return to the HDD Information menu. The added NetHDD will be displayed in the list.

If the added NetHDD is uninitialized, please select it and click the Init button for initialization.
13.3 Managing eSATA

**Purpose:**
When there is an external eSATA device connected to NVR, you can configure eSATA for the use of Record/Capture or Export, and you can manage the eSATA in the NVR.

**Steps:**
1. Enter the Advanced Record Settings interface.
   Menu > Record > Advanced
2. Select the eSATA type to Export or Record/Capture from the dropdown list of eSATA.
   *Export*: use the eSATA for backup. Refer to *Backup using eSATA HDDs* in Chapter *Back up by Normal Video/Picture* Search for operating instructions.
   *Record/Capture*: use the eSATA for record/capture. Refer to the following steps for operating instructions.

   ![Figure 13. 11 Set eSATA Mode](image)

3. When the eSATA type is selected to Record/Capture, enter the HDD Information interface.
   Menu > HDD > General
4. Edit the property of the selected eSATA, or initialize it is required.

   ![NOTE](image)

   Two storage modes can be configured for the eSATA when it is used for Record/Capture. Please refer to *Chapter Managing HDD Group* and *Chapter Configuring Quota Mode* for details.

   ![Figure 13. 12 Initialize Added eSATA](image)
13.4 Managing HDD Group

13.4.1 Setting HDD Groups

*Purpose:*
Multiple HDDs can be managed in groups. Video from specified channels can be recorded onto a particular HDD group through HDD settings.

*Steps:*
1. Enter the Storage Mode interface.
   Menu > HDD > Advanced > Storage Mode
2. Set the Mode to Group, as shown in Figure 13.13.

![Figure 13.13 Storage Mode Interface](image)

3. Click the Apply button and the following Attention box will pop up.

![Figure 13.14 Attention for Reboot](image)

4. Click the Yes button to reboot the device to activate the changes.
5. After reboot of device, enter the HDD Information interface.
   Menu > HDD > General
6. Select HDD from the list and click icon to enter the Local HDD Settings interface, as shown in Figure 13.15.

![Figure 13.15 Local HDD Settings Interface](image)
7. Select the Group number for the current HDD.

   The default group No. for each HDD is 1.

8. Click the **OK** button to confirm the settings.

![Figure 13. 16 Confirm HDD Group Settings](image)

9. In the pop-up Attention box, click the **Yes** button to finish the settings.

### 13.4.2 Setting HDD Property

**Purpose:**
The HDD property can be set to redundancy, read-only or read/write (R/W). Before setting the HDD property, please set the storage mode to Group (refer to step 1-4 of Chapter Setting HDD Groups).

A HDD can be set to read-only to prevent important recorded files from being overwritten when the HDD becomes full in overwrite recording mode.

When the HDD property is set to redundancy, the video can be recorded both onto the redundancy HDD and the R/W HDD simultaneously so as to ensure high security and reliability of video data.

**Steps:**
1. Enter the HDD Information interface.
   Menu > HDD> General

2. Select HDD from the list and click the **local HDD** icon to enter the Local HDD Settings interface, as shown in Figure 13. 17.

![Figure 13. 17 Set HDD Property](image)

3. Set the HDD property to R/W, Read-only or Redundancy.

4. Click the **OK** button to save the settings and exit the interface.

5. In the HDD Information menu, the HDD property will be displayed in the list.
At least 2 hard disks must be installed on your NVR when you want to set a HDD to Redundancy, and there is one HDD with R/W property.
13.5 Configuring Quota Mode

**Purpose:**
Each camera can be configured with allocated quota for the storage of recorded files or captured pictures.

**Steps:**
1. Enter the Storage Mode interface.
   - Menu > HDD > Advanced
2. Set the Mode to Quota, as shown in Figure 13.18.

   ![Figure 13.18 Storage Mode Settings Interface](image)

   The NVR must be rebooted to enable the changes to take effect.

3. Select a camera for which you want to configure quota.
4. Enter the storage capacity in the text fields of **Max. Record Capacity (GB)** and **Max. Picture Capacity (GB)**, as shown in Figure 13.19.

   ![Figure 13.19 Configure Record/Picture Quota](image)

5. You can copy the quota settings of the current camera to other cameras if required. Click the **Copy** button to enter the Copy Camera menu, as shown in Figure 13.20.
6. Select the camera(s) to be configured with the same quota settings. You can also click the checkbox of IP Camera to select all cameras.

7. Click the OK button to finish the Copy settings and back to the Storage Mode interface.

8. Click the Apply button to apply the settings.

Note

If the quota capacity is set to 0, then all cameras will use the total capacity of HDD for record and picture capture.
13.6 Configuring Disk Clone

**Purpose:**
If the S.M.A.R.T. detection result declares the HDD is abnormal, you can choose to clone all the data on the HDD to an inserted eSATA disk manually. Refer to *Chapter 12.8 HDD Detection* for details of S.M.A.R.T detection.

**Before you start:**
An eSATA disk should be connected to the device.

**Steps:**
1. Enter the HDD Advanced Setting interface:
   - Menu > HDD > Advanced
2. Click the Disk Clone tab to enter the disk clone configuring interface.
3. Make sure the usage of the eSATA disk is set as Export.
   - If not, click the Set button to set it. Choose Export and click the OK button.
4. Check the checkbox of the HDD to be cloned in the Clone Source list.

**Note:**
The capacity of destination disk must be the same as that of the clone source disk.

*Figures 13.21 Disk Clone Configuration Interface, 13.22 Setting eSATA Usage*
5. Click the **Clone** button and a message box pops up.

![Message Box for Disk Clone](image)

Figure 13. 23 Message Box for Disk Clone

6. Click the **Yes** button to continue.

You can check the clone progress in the HDD status.

![Check Disk Clone Progress](image)

Figure 13. 24 Check Disk Clone Progress
13.7 Checking HDD Status

Purpose:
You may check the status of the installed HDDs on NVR so as to take immediate check and maintenance in case of HDD failure.

Checking HDD Status in HDD Information Interface
Steps:
1. Enter the HDD Information interface.
   Menu > HDD>General
2. Check the status of each HDD which is displayed on the list, as shown in Figure 13. 25.

If the status of HDD is Normal or Sleeping, it works normally. If the status is Uninitialized or Abnormal, please initialize the HDD before use. And if the HDD initialization is failed, please replace it with a new one.

Checking HDD Status in HDD Information Interface
Steps:
1. Enter the System Information interface.
   Menu >Maintenance > System Info
2. Click the HDD tab to view the status of each HDD displayed on the list, as shown in Figure 13. 26.
### Figure 13.26 View HDD Status (2)

- **Free Space**: 1,002GB
13.8 HDD Detection

**Purpose:**
The device provides the HDD detection function such as the adopting of the S.M.A.R.T. and the Bad Sector Detection technique. The S.M.A.R.T. (Self-Monitoring, Analysis and Reporting Technology) is a monitoring system for HDD to detect and report on various indicators of reliability in the hopes of anticipating failures.

**S.M.A.R.T. Settings**

**Steps:**
1. Enter the S.M.A.R.T Settings interface.
   
   Menu > Maintenance > HDD Detect

2. Select the HDD to view its S.M.A.R.T information list, as shown in Figure 13. 27.

![Figure 13. 27 S.M.A.R.T Settings Interface](image)

The related information of the S.M.A.R.T. is shown on the interface.

You can choose the self-test types as Short Test, Expanded Test or the Conveyance Test. Click the start button to start the S.M.A.R.T. HDD self-evaluation.

**Note:**
If you want to use the HDD even when the S.M.A.R.T. checking is failed, you can check the checkbox of the Continue to use the disk when self-evaluation is failed item.

**Bad Sector Detection**

**Steps:**

1. Click the Bad Sector Detection tab.

2. Select the HDD No. in the dropdown list you want to configure, and choose All Detection or Key Area Detection as the detection type.

3. Click the Detect button to start the detection.
And you can click **Error info** button to see the detailed damage information.
And you can also pause/resume or cancel the detection.
13.9 Configuring HDD Error Alarms

Purpose:
You can configure the HDD error alarms when the HDD status is Uninitialized or Abnormal.

Steps:
1. Enter the Exception interface.
   Menu > Configuration > Exceptions
2. Select the Exception Type to HDD Error from the dropdown list.
3. Click the checkbox(s) below to select the HDD error alarm type(s), as shown in Figure 13. 29.

   The alarm type can be selected to: Audible Warning, Notify Surveillance Center, Send Email and Trigger Alarm Output. Please refer to Chapter Setting Alarm Response Actions.

4. When the Trigger Alarm Output is selected, you can also select the alarm output to be triggered from the list below.
5. Click the Apply button to save the settings
Chapter 14 Camera Settings
14.1 Configuring OSD Settings

**Purpose:**
You can configure the OSD (On-screen Display) settings for the camera, including date /time, camera name, etc.

**Steps:**
1. Enter the OSD Configuration interface.
   Menu > Camera > OSD
2. Select the camera to configure OSD settings.
3. Edit the Camera Name in the text field.
4. Configure the Display Name, Display Date and Display Week by clicking the checkbox.
5. Select the Date Format, Time Format and Display Mode.

![OSD Configuration Interface](image)

Figure 14.1 OSD Configuration Interface

6. You can use the mouse to click and drag the text frame on the preview window to adjust the OSD position.
7. Click the **Apply** button to apply the settings.
14.2 Configuring Privacy Mask

Purpose:
You are allowed to configure the four-sided privacy mask zones that cannot be viewed by the operator. The privacy mask can prevent certain surveillance areas to be viewed or recorded.

Steps:
1. Enter the Privacy Mask Settings interface.
   Menu > Camera > Privacy Mask
2. Select the camera to set privacy mask.
3. Click the checkbox of Enable Privacy Mask to enable this feature.

![Privacy Mask Settings Interface](image1)

4. Use the mouse to draw a zone on the window. The zones will be marked with different frame colors.

   **NOTE**
   Up to 4 privacy masks zones can be configured and the size of each area can be adjusted.

5. The configured privacy mask zones on the window can be cleared by clicking the corresponding Clear Zone1-4 icons on the right side of the window, or click **Clear All** to clear all zones.

![Set Privacy Mask Area](image2)

6. Click the **Apply** button to save the settings.
14.3 Configuring Video Parameters

Steps:

1. Enter the Image Settings interface.
   Menu > Camera > Image

2. Select the camera to set image parameters.
3. You can click on the arrow to change the value of each parameter.
4. Click the **Apply** button to save the settings.

![Image Settings Interface](Image Settings Interface)
Chapter 15  NVR Management and Maintenance
15.1 Viewing System Information

Steps:
1. Enter the System Information interface.
   Menu >Maintenance>System Info
2. You can click the Device Info, Camera, Record, Alarm, Network and HDD tabs to view the system information of the device.

![Device Information Interface](image)

Figure 15.1 Device Information Interface

You can add the device to your mobile client software (iVMS-4500) via scanning the QR Code.
15.2 Searching & Exporting Log Files

*Purpose:*  
The operation, alarm, exception and information of the NVR can be stored in log files, which can be viewed and exported at any time.

*Steps:*
1. Enter the Log Search interface.  
   Menu > Maintenance > Log Information

![Log Search Interface](image)

   **Figure 15.2 Log Search Interface**

2. Set the log search conditions to refine your search, including the Start Time, End Time, Major Type and Minor Type.
3. Click the **Search** button to start search log files.
4. The matched log files will be displayed on the list shown below.
Up to 2000 log files can be displayed each time.

5. You can click the button of each log or double click it to view its detailed information, as shown in Figure 15.4. And you can also click the button to view the related video files if available.

6. If you want to export the log files, click the Export button to enter the Export menu, as shown in Figure 15.5.

You can also click Export All on the Log Search interface (Figure 15.2) to enter the Export interface (Figure 15.5), and all the system logs will be exported to the backup device.
7. Select the backup device from the dropdown list of **Device Name**.

8. Select the format of the log files to be exported. Up to 9 formats are selectable.

9. Click the **Export** to export the log files to the selected backup device.
   
   You can click the **New Folder** button to create new folder in the backup device, or click the **Format** button to format the backup device before log export.

![Export Log Files](image)

**NOTE**: Please connect the backup device to NVR before operating log export.

### 15.3 Importing/Exporting IP Camera Info

**Purpose:**

The information of added IP camera can be generated into an excel file and exported to the local device for backup, including the IP address, manage port, password of admin, etc. And the exported file can be edited on your PC, like adding or deleting the content, and copy the setting to other devices by importing the excel file to it.

**Steps:**

1. Enter the camera management interface.
   
   **Menu > Camera > IP Camera Import/Export**

2. Click the IP Camera Import/Export tab, the content of detected plugged external device appears.

3. Click the **Export** button to export configuration files to the selected local backup device.

4. To import a configuration file, select the file from the selected backup device and click the **Import** button.
   
   After the importing process is completed, you must reboot the NVR.
15.4 Importing/Exporting Configuration Files

Purpose:
The configuration files of the NVR can be exported to local device for backup; and the configuration files of one NVR can be imported to multiple NVR devices if they are to be configured with the same parameters.

Steps:
1. Enter the Import/Export Configuration File interface.
   Menu > Maintenance > Import/Export

![Figure 15.6 Import/Export Config File](image)

2. Click the Export button to export configuration files to the selected local backup device.
3. To import a configuration file, select the file from the selected backup device and click the Import button.
   After the import process is completed, you must reboot the NVR.

   **NOTE**

   After having finished the import of configuration files, the device will reboot automatically.
15.5 Upgrading System

*Purpose:*  
The firmware on your NVR can be upgraded by local backup device or remote FTP server.

15.5.1 Upgrading by Local Backup Device

*Steps:*  
1. Connect your NVR with a local backup device where the update firmware file is located.  
2. Enter the Upgrade interface.  
   Menu >Maintenance>Upgrade  
3. Click the **Local Upgrade** tab to enter the local upgrade menu, as shown in Figure 15.7.

![Figure 15.7 Local Upgrade Interface]

4. Select the update file from the backup device.  
5. Click the **Upgrade** button to start upgrading.  
6. After the upgrading is complete, reboot the NVR to activate the new firmware.

15.5.2 Upgrading by FTP

*Before you start:*  
Ensure the network connection of the PC (running FTP server) and the device is valid and correct. Run the FTP server on the PC and copy the firmware into the corresponding directory of your PC.

*Steps:*  
1. Enter the Upgrade interface.  
   Menu >Maintenance>Upgrade
2. Click the FTP tab to enter the local upgrade interface, as shown in Figure 15.8.

<table>
<thead>
<tr>
<th>Local Upgrade</th>
<th>FTP</th>
</tr>
</thead>
<tbody>
<tr>
<td>FTP Server Address</td>
<td></td>
</tr>
</tbody>
</table>

Figure 15.8 FTP Upgrade Interface

3. Enter the FTP Server Address in the text field.
4. Click the Upgrade button to start upgrading.
5. After the upgrading is complete, reboot the NVR to activate the new firmware.
15.6 Restoring Default Settings

Steps:

1. Enter the Default interface.
   
   Menu > Maintenance > Default

   ![Figure 15.9 Restore Defaults](image)

2. Select the restoring type from the following three options.

   - **Restore Defaults**: Restore all parameters, except the network (including IP address, subnet mask, gateway, MTU, NIC working mode, default route, server port, etc.) and user account parameters, to the factory default settings.
   - **Factory Defaults**: Restore all parameters to the factory default settings.
   - **Restore to Inactive**: Restore the device to the inactive status.

3. Click the OK button to restore the default settings.

The device will reboot automatically after restoring to the default settings.
Chapter 16   Others
16.1 Configuring RS-232 Serial Port

The RS-232 serial port is not supported by DS-7600NI-I2 (/P) series NVR.

Purpose:
The RS-232 port can be used in two ways:

- Parameters Configuration: Connect a PC to the NVR through the PC serial port. Device parameters can be configured by using software such as HyperTerminal. The serial port parameters must be the same as the NVR’s when connecting with the PC serial port.

- Transparent Channel: Connect a serial device directly to the NVR. The serial device will be controlled remotely by the PC through the network and the protocol of the serial device.

Steps:
1. Enter the RS-232 Settings interface.
   Menu >Configuration> RS-232

   ![RS-232 Settings Interface](image)

2. Configure RS-232 parameters, including baud rate, data bit, stop bit, parity, flow control and usage.
3. Click the Apply button to save the settings.
16.2 Configuring General Settings

Purpose:
You can configure the BNC output standard, VGA output resolution, mouse pointer speed through the Menu > Configuration > General interface.

Steps:
1. Enter the General Settings interface.
   Menu > Configuration > General
2. Select the General tab.

![Figure 16. 2 General Settings Interface (DS-9600NI-I8)](image)

![Figure 16. 3 General Settings Interface (DS-7600NI-I2 and DS-7700NI-I4)](image)
3. Configure the following settings:
   - **Language:** The default language used is *English*.
   - **Output Standard:** Select the output standard to NTSC or PAL, which must be the same with the video input standard.
   - **Resolution:** For the DS-9600NI-I8 series NVR, you can configure the VGA/HDMI resolution and VGA2/HDMI 2 resolution. And up to 4K (3840 × 2160) resolution is selectable for the VGA/HDMI output.
     For the DS-7600NI-I2 (/P) and DS-7700NI-I4 (/P) series NVR, you can configure the VGA resolution and HDMI resolution respectively. And up to 4K (3840 × 2160) resolution is selectable for the HDMI output.
   - **Time Zone:** Select the time zone.
   - **Date Format:** Select the date format.
   - **System Date:** Select the system date.
   - **System Time:** Select the system time.
   - **Mouse Pointer Speed:** Set the speed of mouse pointer; 4 levels are configurable.
   - **Enable Wizard:** Enable/disable the Wizard when the device starts up.
   - **Enable Password:** Enable/disable the use of the login password.

4. Click the **Apply** button to save the settings.
16.3 Configuring DST Settings

Steps:

1. Enter the General Settings interface.
   Menu >Configuration>General
2. Choose DST Settings tab.

You can check the checkbox before the Auto DST Adjustment item.
Or you can manually check the Enable DST checkbox, and then you choose the date of the DST period.

Figure 16.4 DST Settings Interface
16.4 Configuring More Settings

Steps:
1. Enter the General Settings interface.
   Menu >Configuration>General
2. Click the More Settings tab to enter the More Settings interface.

![Figure 16.5 More Settings Interface](image)

3. Configure the following settings:
   - **Device Name:** Edit the name of NVR.
   - **Device No.:** Edit the serial number of NVR. The Device No. can be set in the range of 1~255, and the default No. is 255. The number is used for the remote and keyboard control.
   - **Auto Logout:** Set timeout time for menu inactivity. E.g., when the timeout time is set to 5 Minutes, then the system will exit from the current operation menu to live view screen after 5 minutes of menu inactivity.
   - **Enable HDMI/VGA Simultaneous Output** (for DS-9600NI-I8 only): By default, the video outputs from HDMI and VGA interfaces can be operated separately. You can set the simultaneous output for the HDMI and VGA by checking the checkbox of the option.
   - **Menu Output Mode:** You can choose the menu display on different video output. For the DS-9600NI-I8 series NVR, you can select the menu output mode to VGA/HDMI, VGA2/HDMI2.
     And for the DS-7600NI-I2 (/P) and DS-7700NI-I4 (/P) series NVR, you can select the menu output mode to VGA, HDMI or Auto. When the Auto option is selected and both HDMI and VGA outputs are connected, the device will detect and set the HDMI as the menu output.
4. Click the **Apply** button to save the settings.
16.5 Managing User Accounts

**Purpose:**
There is a default account in the NVR: Administrator. The Administrator user name is admin and the password is set when you start the device for the first time. The Administrator has the permission to add and delete user and configure user parameters.

16.5.1 Adding a User

**Steps:**
1. Enter the User Management interface.
   
   Menu >Configuration>User

   ![User Management Interface](image)

   Figure 16. 6 User Management Interface

2. Click the Add button to enter the Add User interface.

   ![Add User Menu](image)

   Figure 16. 7 Add User Menu

3. Enter the information for new user, including User Name, Password, Confirm, Level and User’s MAC.
Address.

Password: Set the password for the user account.

**STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Level: Set the user level to Operator or Guest. Different user levels have different operating permission.

- **Operator:** The Operator user level has permission of Two-way Audio in Remote Configuration and all operating permission in Camera Configuration by default.

- **Guest:** The Guest user has no permission of Two-way Audio in Remote Configuration and only has the local/remote playback in the Camera Configuration by default.

User’s MAC Address: The MAC address of the remote PC which logs onto the NVR. If it is configured and enabled, it only allows the remote user with this MAC address to access the NVR.

4. Click the OK button to save the settings and go back to the User Management interface. The added new user will be displayed on the list, as shown in Figure 16.8.

![Figure 16.8 Added User Listed in User Management Interface](image)

5. Select the user from the list and then click the button to enter the Permission settings interface, as shown in Figure 16.9.

![Figure 16.9 User Permission Settings Interface](image)
6. Set the operating permission of Local Configuration, Remote Configuration and Camera Configuration for the user.

**Local Configuration**
- Local Log Search: Searching and viewing logs and system information of NVR.
- Local Parameters Settings: Configuring parameters, restoring factory default parameters and importing/exporting configuration files.
- Local Camera Management: The adding, deleting and editing of IP cameras.
- Local Advanced Operation: Operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
- Local Shutdown Reboot: Shutting down or rebooting the NVR.

**Remote Configuration**
- Remote Log Search: Remotely viewing logs that are saved on the NVR.
- Remote Parameters Settings: Remotely configuring parameters, restoring factory default parameters and importing/exporting configuration files.
- Remote Camera Management: Remote adding, deleting and editing of the IP cameras.
- Remote Video Output Control: Sending remote button control signal.
- Two-Way Audio: Realizing two-way radio between the remote client and the NVR.
- Remote Alarm Control: Remotely arming (notify alarm and exception message to the remote client) and controlling the alarm output.
- Remote Advanced Operation: Remotely operating HDD management (initializing HDD, setting HDD property), upgrading system firmware, clearing I/O alarm output.
- Remote Shutdown/Reboot: Remotely shutting down or rebooting the NVR.

**Camera Configuration**
- Remote Live View: Remotely viewing live video of the selected camera(s).
- Local Manual Operation: Locally starting/stopping manual recording and alarm output of the selected camera(s).
- Remote Manual Operation: Remotely starting/stopping manual recording and alarm output of the selected camera(s).
- Local Playback: Locally playing back recorded files of the selected camera(s).
- Remote Playback: Remotely playing back recorded files of the selected camera(s).
- Local PTZ Control: Locally controlling PTZ movement of the selected camera(s).
- Remote PTZ Control: Remotely controlling PTZ movement of the selected camera(s).
- Local Video Export: Locally exporting recorded files of the selected camera(s).

7. Click the **OK** button to save the settings and exit interface.

Only the *admin* user account has the permission of restoring factory default parameters.

### 16.5.2 Deleting a User

**Steps:**
1. Enter the User Management interface.
   Menu >Configuration> User
2. Select the user to be deleted from the list, as shown in Figure 16.10.
3. Click the icon to delete the selected user account.

16.5.3 Editing a User

For the added user accounts, you can edit the parameters.

Steps:
1. Enter the User Management interface.
   Menu > Configuration > User
2. Select the user to be edited from the list, as shown in Figure 16. 10.
3. Click the icon to enter the Edit User interface, as shown in Figure 16. 11.

4. Edit the corresponding parameters.
   - **Operator and Guest**
     You can edit the user information, including user name, password, permission level and MAC address.
     Check the checkbox of Change Password if you want to change the password, and input the new password in the text field of Password and Confirm. A strong password is recommended.
   - **Admin**
     You are only allowed to edit the password and MAC address. Check the checkbox of Change Password if you want to change the password, and input the correct old password, and the new password in the text field of Password and Confirm.
STRONG PASSWORD RECOMMENDED — We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

5. Click the OK button to save the settings and exit the menu.

6. For the Operator or Guest user account, you can also click the button on the user management interface to edit the permission.

17.2 Glossary

- **Dual Stream**: Dual stream is a technology used to record high resolution video locally while transmitting a lower resolution stream over the network. The two streams are generated by the DVR, with the main stream having a maximum resolution of 4CIF and the sub-stream having a maximum resolution of CIF.

- **HDD**: Acronym for Hard Disk Drive. A storage medium which stores digitally encoded data on platters with magnetic surfaces.

- **DHCP**: Dynamic Host Configuration Protocol (DHCP) is a network application protocol used by devices (DHCP clients) to obtain configuration information for operation in an Internet Protocol network.

- **HTTP**: Acronym for Hypertext Transfer Protocol. A protocol to transfer hypertext request and information between servers and browsers over a network.

- **PPPoE**: PPPoE, Point-to-Point Protocol over Ethernet, is a network protocol for encapsulating Point-to-Point Protocol (PPP) frames inside Ethernet frames. It is used mainly with ADSL services where individual users connect to the ADSL transceiver (modem) over Ethernet and in plain Metro Ethernet networks.

- **DDNS**: Dynamic DNS is a method, protocol, or network service that provides the capability for a networked device, such as a router or computer system using the Internet Protocol Suite, to notify a domain name server to change, in real time (ad-hoc) the active DNS configuration of its configured hostnames, addresses or other information stored in DNS.

- **Hybrid DVR**: A hybrid DVR is a combination of a DVR and NVR.

- **NTP**: Acronym for Network Time Protocol. A protocol designed to synchronize the clocks of computers over a network.

- **NTSC**: Acronym for National Television System Committee. NTSC is an analog television standard used in such countries as the United States and Japan. Each frame of an NTSC signal contains 525 scan lines at 60Hz.

- **NVR**: Acronym for Network Video Recorder. An NVR can be a PC-based or embedded system used for centralized management and storage for IP cameras, IP Domes and other DVRs.

- **PAL**: Acronym for Phase Alternating Line. PAL is also another video standard used in broadcast televisions systems in large parts of the world. PAL signal contains 625 scan lines at 50Hz.

- **PTZ**: Acronym for Pan, Tilt, Zoom. PTZ cameras are motor driven systems that allow the camera to pan left and right, tilt up and down and zoom in and out.

- **USB**: Acronym for Universal Serial Bus. USB is a plug-and-play serial bus standard to interface devices to a host computer.
17.3 Troubleshooting

- **No image displayed on the monitor after starting up normally.**
  
  **Possible Reasons**
  
  a) No VGA or HDMI connections.
  b) Connection cable is damaged.
  c) Input mode of the monitor is incorrect.
  
  **Steps**
  
  1. Verify the device is connected with the monitor via HDMI or VGA cable. 
     If not, please connect the device with the monitor and reboot.
  2. Verify the connection cable is good.
     If there is still no image display on the monitor after rebooting, please check if the connection cable is good, and change a cable to connect again.
  3. Verify Input mode of the monitor is correct.
     Please check the input mode of the monitor matches with the output mode of the device (e.g. if the output mode of NVR is HDMI output, then the input mode of monitor must be the HDMI input). And if not, please modify the input mode of monitor.
  4. Check if the fault is solved by the step 1 to step 3. 
     If it is solved, finish the process. 
     If not, please contact the engineer from Hikvision to do the further process.

- **There is an audible warning sound “Di-Di-Di-DiDi” after a new bought NVR starts up.**
  
  **Possible Reasons**
  
  a) No HDD is installed in the device.
  b) The installed HDD has not been initialized.
  c) The installed HDD is not compatible with the NVR or is broken-down.
  
  **Steps**
  
  1. Verify at least one HDD is installed in the NVR. 
     1) If not, please install the compatible HDD. 
     
     Please refer to the “Quick Operation Guide” for the HDD installation steps.
     2) If you don’t want to install a HDD, select “Menu>Configuration>Exceptions”, and uncheck the Audible Warning checkbox of “HDD Error”.
  2. Verify the HDD is initialized. 
     1) Select “Menu>HDD>General”. 
     2) If the status of the HDD is “Uninitialized”, please check the checkbox of corresponding HDD and click the “Init” button.
  3. Verify the HDD is detected or is in good condition.
     1) Select “Menu>HDD>General”.
     2) If the HDD is not detected or the status is “Abnormal”, please replace the dedicated HDD according to the requirement.
  4. Check if the fault is solved by the step 1 to step 3. 
     If it is solved, finish the process. 
     If not, please contact the engineer from Hikvision to do the further process.

- **The status of the added IP camera displays as “Disconnected” when it is connected through Private**
Protocol. Select “Menu>Camera>Camera>IP Camera” to get the camera status.

**Possible Reasons**

a) Network failure, and the NVR and IP camera lost connections.
b) The configured parameters are incorrect when adding the IP camera.
c) Insufficient bandwidth.

**Steps**

1. Verify the network is connected.
   1) Connect the NVR and PC with the RS-232 cable.
   2) Open the Super Terminal software, and execute the ping command. Input “ping IP” (e.g. ping 172.6.22.131).

        Simultaneously press Ctrl and C to exit the ping command.

   If there exists return information and the time value is little, the network is normal.

2. Verify the configuration parameters are correct.
   1) Select “Menu>Camera>Camera>IP Camera”.
   2) Verify the following parameters are the same with those of the connected IP devices, including IP address, protocol, management port, user name and password.

3. Verify the whether the bandwidth is enough.
   1) Select “Menu>Maintenance > Net Detect > Network Stat.”.
   2) Check the usage of the access bandwidth, and see if the total bandwidth has reached its limit.

4. Check if the fault is solved by the step 1 to step 3.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.

- The IP camera frequently goes online and offline and the status of it displays as “Disconnected”.

**Possible Reasons**

a) The IP camera and the NVR versions are not compatible.
b) Unstable power supply of IP camera.
c) Unstable network between IP camera and NVR.
d) Limited flow by the switch connected with IP camera and NVR.

**Steps**

1. Verify the IP camera and the NVR versions are compatible.
   1) Enter the IP camera Management interface “Menu > Camera > Camera>IP Camera”, and view the firmware version of connected IP camera.
   2) Enter the System Info interface “Menu>Maintenance>System Info>Device Info”, and view the firmware version of NVR.

2. Verify power supply of IP camera is stable.
   1) Verify the power indicator is normal.
   2) When the IP camera is offline, please try the ping command on PC to check if the PC connects with the IP camera.

3. Verify the network between IP camera and NVR is stable.
   1) When the IP camera is offline, connect PC and NVR with the RS-232 cable.
   2) Open the Super Terminal, use the ping command and keep sending large data packages to the connected IP camera, and check if there exists packet loss.

        Simultaneously press Ctrl and C to exit the ping command.

**Example:** Input **ping 172.6.22.131 –l 1472 –f.**
4. Verify the switch is not flow control.
   Check the brand, model of the switch connecting IP camera and NVR, and contact with the manufacturer of the switch to check if it has the function of flow control. If so, please turn it down.
5. Check if the fault is solved by the step 1 to step 4.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.

- No monitor connected with the NVR locally and when you manage the IP camera to connect with the device by web browser remotely, of which the status displays as Connected. And then you connect the device with the monitor via VGA or HDMI interface and reboot the device, there is black screen with the mouse cursor.

Connect the NVR with the monitor before startup via VGA or HDMI interface, and manage the IP camera to connect with the device locally or remotely, the status of IP camera displays as Connect. And then connect the device with the CVBS, and there is black screen either.

**Possible Reasons:**
After connecting the IP camera to the NVR, the image is output via the main spot interface by default.

**Steps:**
1. Enable the output channel.
2. Select “Menu > Configuration > Live View > View”, and select video output interface in the drop-down list and configure the window you want to view.

   **NOTE**
   - The view settings can only be configured by the local operation of NVR.
   - Different camera orders and window-division modes can be set for different output interfaces separately, and digits like “D1” and “D2” stands for the channel number, and “X” means the selected window has no image output.
3. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.

- Live view stuck when video output locally.

**Possible Reasons:**

a) Poor network between NVR and IP camera, and there exists packet loss during the transmission.
b) The frame rate has not reached the real-time frame rate.

**Steps:**
1. Verify the network between NVR and IP camera is connected.
   1) When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
   2) Open the Super Terminal, and execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.

   **NOTE**
   Simultaneously press Ctrl and C to exit the ping command.
2. Verify the frame rate is real-time frame rate.
   Select “Menu > Record > Parameters > Record”, and set the Frame rate to Full Frame.
3. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.
Live view stuck when video output remotely via the Internet Explorer or platform software.

Possible Reasons:

a) Poor network between NVR and IP camera, and there exists packet loss during the transmission.
b) Poor network between NVR and PC, and there exists packet loss during the transmission.
c) The performances of hardware are not good enough, including CPU, memory, etc..

Steps:

1. Verify the network between NVR and IP camera is connected.
   1) When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
   2) Open the Super Terminal, and execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.

   Simultaneously press Ctrl and C to exit the ping command.

2. Verify the network between NVR and PC is connected.
   1) Open the cmd window in the Start menu, or you can press “windows+R” shortcut key to open it.
   2) Use the ping command to send large packet to the NVR, execute the command of “ping 192.168.0.0 -l 1472 -f” (the IP address may change according to the real condition), and check if there exists packet loss.

   Simultaneously press Ctrl and C to exit the ping command.

3. Verify the hardware of the PC is good enough.
   Simultaneously press Ctrl, Alt and Delete to enter the windows task management interface, as shown in the following figure.

   Windows task management interface
   - Select the “Performance” tab; check the status of the CPU and Memory.
   - If the resource is not enough, please end some unnecessary processes.

4. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.
When using the NVR to get the live view audio, there is no sound or there is too much noise, or the volume is too low.

**Possible Reasons:**
- a) Cable between the pickup and IP camera is not connected well; impedance mismatches or incompatible.
- b) The stream type is not set as “Video & Audio”.
- c) The encoding standard is not supported with NVR.

**Steps:**
1. Verify the cable between the pickup and IP camera is connected well; impedance matches and compatible.
   Log in the IP camera directly, and turn the audio on, check if the sound is normal. If not, please contact the manufacturer of the IP camera.
2. Verify the setting parameters are correct.
   Select “Menu > Record > Parameters > Record”, and set the Stream Type as “Audio & Video”.
3. Verify the audio encoding standard of the IP camera is supported by the NVR.
   NVR supports G722.1 and G711 standards, and if the encoding parameter of the input audio is not one of the previous two standards, you can log in the IP camera to configure it to the supported standard.
4. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.

The image gets stuck when NVR is playing back by single or multi-channel.

**Possible Reasons:**
- a) Poor network between NVR and IP camera, and there exists packet loss during the transmission.
- b) The frame rate is not the real-time frame rate.
- c) The NVR supports up to 16-channel synchronize playback at the resolution of 4CIF, if you want a 16-channel synchronize playback at the resolution of 720p, the frame extracting may occur, which leads to a slight stuck.

**Steps:**
1. Verify the network between NVR and IP camera is connected.
   1) When image is stuck, connect the RS-232 ports on PC and the rear panel of NVR with the RS-232 cable.
   2) Open the Super Terminal, and execute the command of “ping 192.168.0.0 –l 1472 –f” (the IP address may change according to the real condition), and check if there exists packet loss.
   Simultaneously press the Ctrl and C to exit the ping command.
2. Verify the frame rate is real-time frame rate.
   Select “Menu > Record > Parameters > Record”, and set the Frame Rate to “Full Frame”.
3. Verify the hardware can afford the playback.
   Reduce the channel number of playback.
   Select “Menu > Record > Encoding > Record”, and set the resolution and bitrate to a lower level.
4. Reduce the number of local playback channel.
   Select “Menu > Playback”, and uncheck the checkbox of unnecessary channels.
5. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.

No record file found in the NVR local HDD, and prompt “No record file found”.

242
Possible Reasons:

a) The time setting of system is incorrect.
b) The search condition is incorrect.
c) The HDD is error or not detected.

Steps:

1. Verify the system time setting is correct.
   Select “Menu > Configuration > General > General”, and verify the “Device Time” is correct.

2. Verify the search condition is correct.
   Select “Playback”, and verify the channel and time are correct.

3. Verify the HDD status is normal.
   Select “Menu > HDD > General” to view the HDD status, and verify the HDD is detected and can be
   read and written normally.

4. Check if the fault is solved by the above steps.
   If it is solved, finish the process.
   If not, please contact the engineer from Hikvision to do the further process.
17.4 Summary of Changes

Version 3.3.4

Added:
1. Add the new models of DS-7600NI-I2 (/P) and DS-7700NI-I4 (/P).
2. Add the support of EZVIZ Cloud P2P (Step 4 in Chapter 2.3 Using the Wizard for Basic Configuration, Chapter 11.2.2 Configuring EZVIZ Cloud P2P)
## 17.5 List of Compatible IP Cameras

### 17.5.1 List of Hikvision IP Cameras

For the list, our company holds right to interpret.
